

**SUMMARY OF HYDROLOGIC CONDITIONS
IN THE
UPPER DELAWARE RIVER BASIN
October 2006**

Prepared by the
Office of the Delaware River Master
Milford, Pennsylvania

Adjusted streamflow in the upper Delaware River Basin during October was excessive for the fifth consecutive month. The maximum daily mean discharge of 29,600 cfs was recorded on October 29. The minimum daily mean discharge was 3,110 cfs on October 16.

The observed monthly mean streamflow of the Delaware River at Montague, N.J. during October was 7,586 cfs, which is 317 percent of median. The flow at Montague, adjusted for diversions from the basin and change in storage in the major reservoirs, was 9,200 cfs, or 357 percent of median (water years 1971-2000).

On the basis of an 11-station average, precipitation during October was 4.86 inches, which is 137 percent of the 65-year average. The maximum daily-average precipitation during the month was 1.21 inches on October 28. Precipitation in the upper Delaware River Basin during the past 12 months was 9.06 inches more than the long-term average. Precipitation during October was 1.32 inches more than the long-term average for the month.

Combined storage November 1, 2006 in Pepacton, Cannonsville, and Neversink Reservoirs was 99 percent of capacity above the point of maximum depletion. The combined storage of 269 billion gallons was 22 billion gallons more than that of one month ago and 99 billion gallons more than that of one year ago. Median storage on the first day of November in 39 years of record is 156 billion gallons. Cannonsville Reservoir spilled 3.0 billion gallons in October.

As part of statewide networks, the USGS operates ground-water observation wells in the Pennsylvania and New Jersey parts of the Delaware River Basin. Mean water levels during October were above average in 18 of 20 observation wells. Water levels in 14 of 20 wells were above September 2006 levels, and water levels in 18 of 20 wells were above October 2005 levels.

HYDROLOGIC CONDITIONS IN THE UPPER DELAWARE RIVER BASIN
