Q1: genl support

- A. - Oregon, Washington, NW in general different than most states as federal govt controls headwater lands in genl
- AZ, tribes tend to control headwater lands - collaboration sometimes fairly non-existent - more emphasis for tribes
- need to avoid rgt by litigation
- policy long overdue - different fed agencies have occasionally "pulled the rug" out from other agencies in "turf" wars

B. Need to pursue mediation/arbitration of existing misunderstandings/disagreements/barriers
fishability & swimmability & drinkability

C. Engineering Practices
Funding
Partners

- 2A. - Dealing with independent tribes creates multiple priorities - difficult to get collective agreement
- other states need to make clean water a priority
 - legislate priorities
 - flexibility of funding - sharing \$ across agency & jurisdictional boundaries - pool funds/share burden
 - target the most serious problems
 - sharing expertise & budget
 - more global outlook on agency budgeting

- 3A. - Collaboration - How are we going to know the goal has been reached. - Need a clear vision
- Funding participation related to collaboration/participation
 - Need method of measuring success (step-by-step)
 - Better communication w/public to get participation & support

- B. Roadless policy meeting - getting the word out
- Coquille Forest - Fed govt got word out - Tribes brought money
 - legislate it - command it - withhold funding for other programs if not followed - Fund it!
 - Oregon Plan

3c

- Implementation
- Collaborate with Tribes
- communication
- Is this an effort to attempt to get all agencies to work together as one?
