May 24, 2000

Dear Sirs;

Thank you for the opportunity to comment on the proposed, Clean Water Action Plan.

There is very little doubt that all US citizens want clean, unpolluted water, watersheds and waterways. There are concerns about the implementation and implications of this Plan however.

<P>Dear Sirs;

Thank you for the opportunity to comment on the proposed, Clean Water Action Plan.

There is very little doubt that all US citizens want clean, unpolluted water, watersheds and waterways. There are concerns about the implementation and implications of this Plan however.

The CWAP has violated many federal laws, one example being the National Environmental Policy Act, or NEPA. Not going into all the regulations required by NEPA, this Plan has 111 "Key Actions", which cause "impacts" to the "human environment".

Being a local governing body, another concern is the lack of notification, input and viewpoint shared with the authors and directors of this plan.

If these are to be mandated in the fashion set out by the CWAP, communications were not considered valid and opportunities were missed for cooperation.

Is this even a valid concern in Saguache County? We have no framework to say that it is.

No assessments have been made in our areas to ascertain if social, cultural and economic impacts could adversely effect the mostly agricultural areas in Saguache County, having 66% of our county in federal land.

Having read the actions, the data is limited and outdated, using random and faulty "Science"- to support it's basis for the mandates.

The CWAP is in essence working against itself, in its attempt to override the Clean Water Act. This Plan has not been mandated by Congress, and the CWAP attempts to challenge how federally managed lands are governed and used, in violation of the multiple use and sustained yield regulations of those lands set out by FLPMA.

Thank you again for the opportunity to comment on the Clean Water Action Plan.

A question to ponder, "is this Plan really needed?" Saguache County has definite concerns that the answer may be "NO".
