

APPENDIX O—STATION MAL

Station Name: **MAL**
 (Near Mallard Island)
 Position: Lat. 38°02'33"
 Long. 121°54'59"
 Depth: 16.4 m (MLLW)

Manufacturer	Serial Number	Deployment Dates
CT _t : DWR	xx	N/A
ADCP: RDI	BB	7/6/95(187) - 11/16/95(320)
Serviced: 7/6/95(187), 11/16/95(320)		

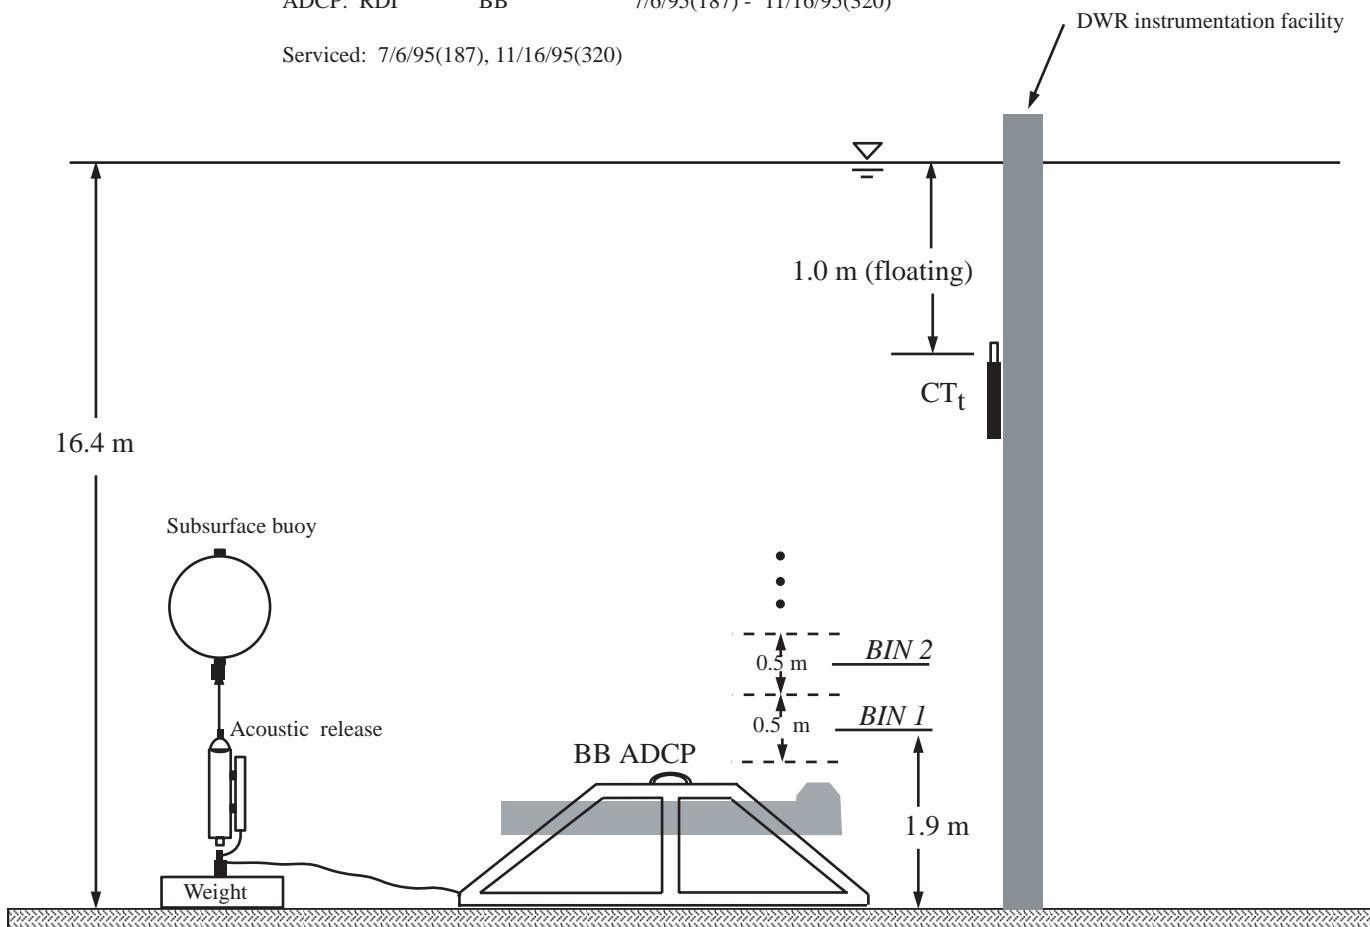

Figure 01. Configuration of instrument deployment, Station MAL, July 6 through November 16, 1995, Suisun Bay, California. m, meters; MLLW, mean lower low water; ADCP, acoustic Doppler current profiler; BB ADCP, broad-band acoustic Doppler current profiler; RD Ins, R.D. Instruments, Inc.; CT, conductivity-temperature; DWR, California Department of Water Resources; BIN, a discrete measurement location in the vertical.

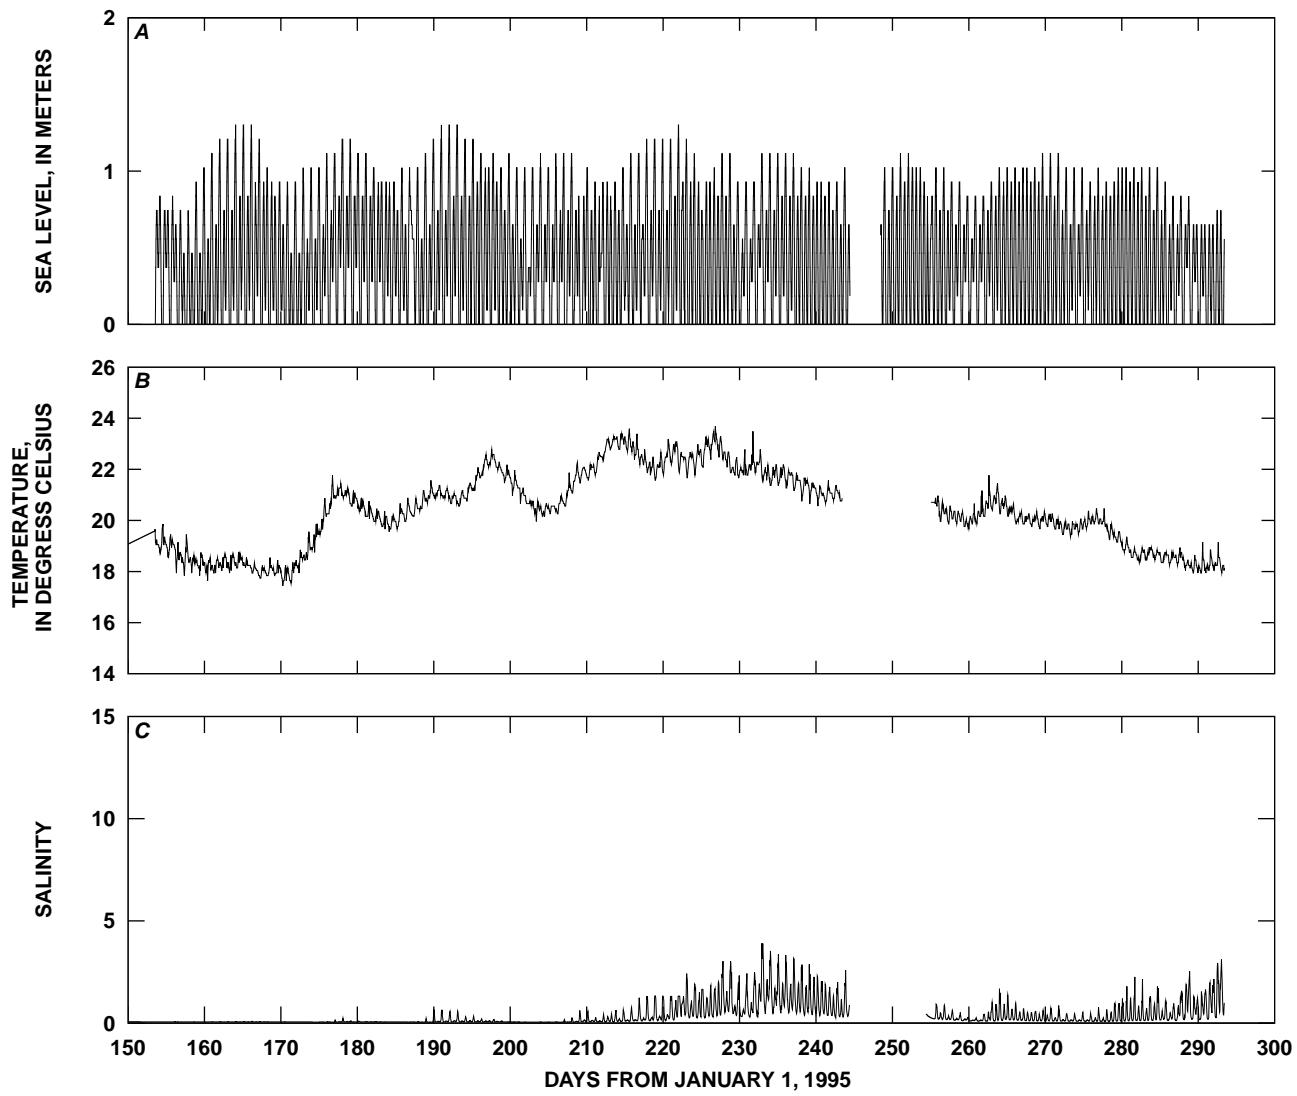

Figure 02. Time-series plots of *A*, sea level; *B*, temperature; and *C*, salinity, Station MAL, May 8 through October 15, 1995, Suisun Bay, California. Near-surface sensor. Sea level was measured using a float-driven incremental encoder. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

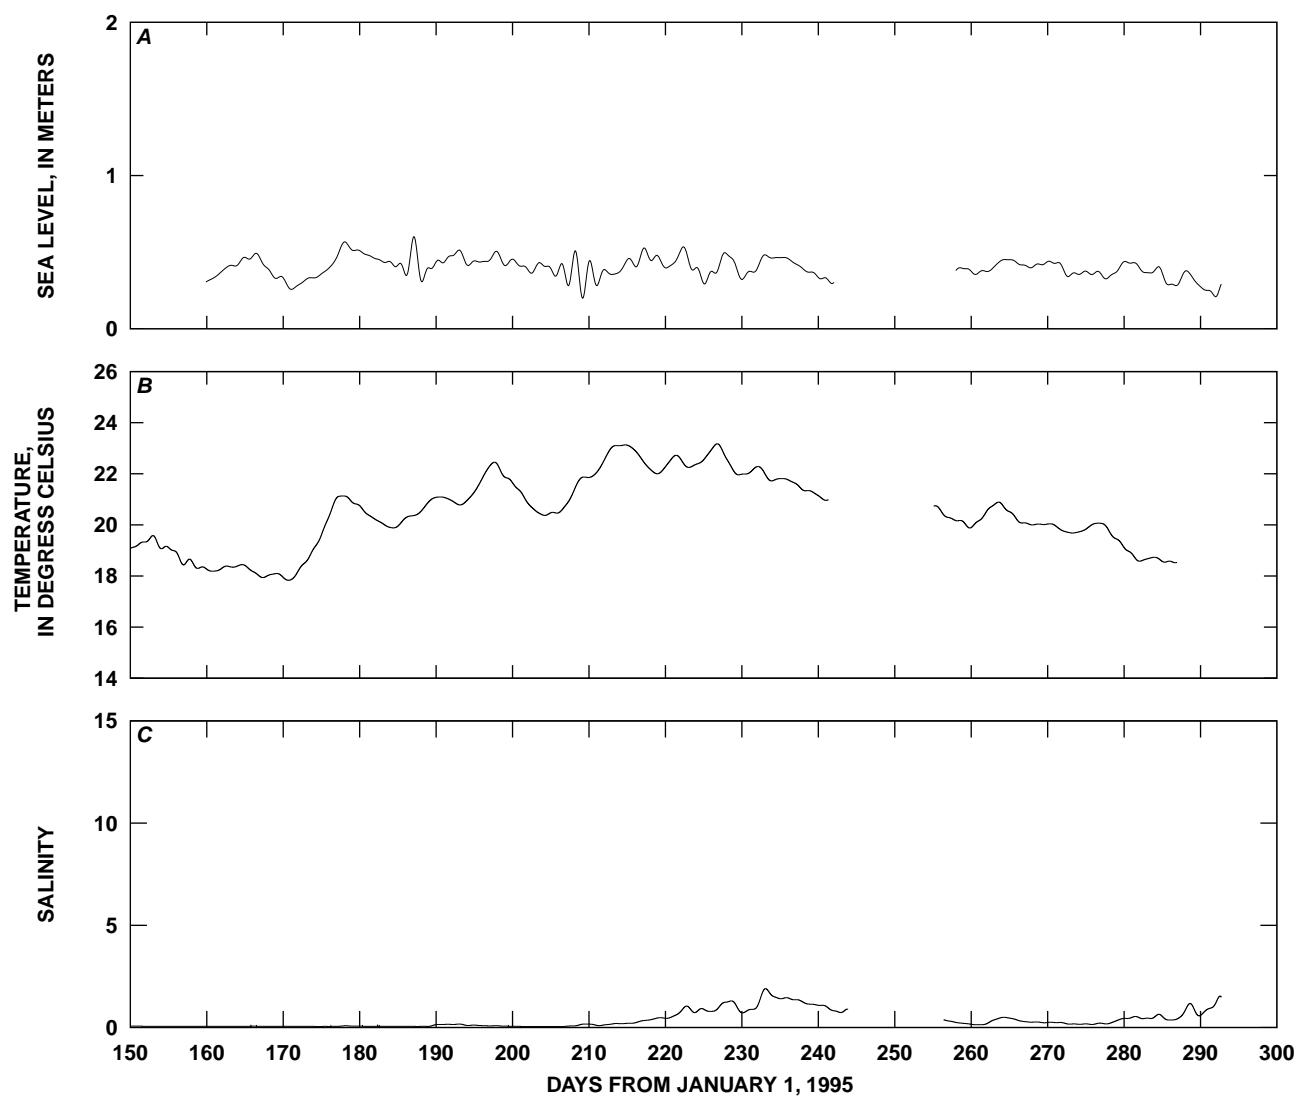

Figure 03. Time-series plots of low-pass-filtered *A*, sea level; *B*, temperature; and *C*, salinity, Station MAL, May 8 through October 15, 1995, Suisun Bay, California. Near-surface sensor. Sea level was measured using a float-driven incremental encoder. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

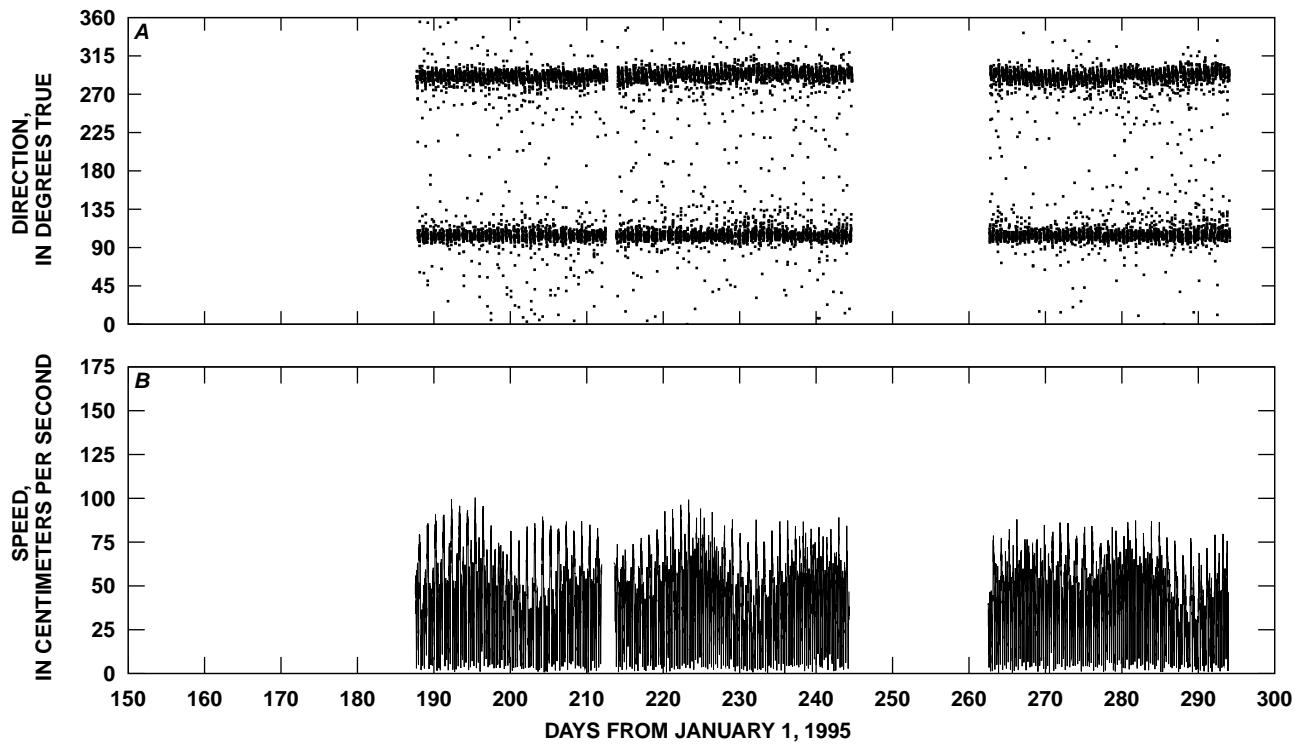

Figure 04. Time-series plots of tidal currents, Station MAL, July 6 through November 16, 1995, BIN 1 near-bottom BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

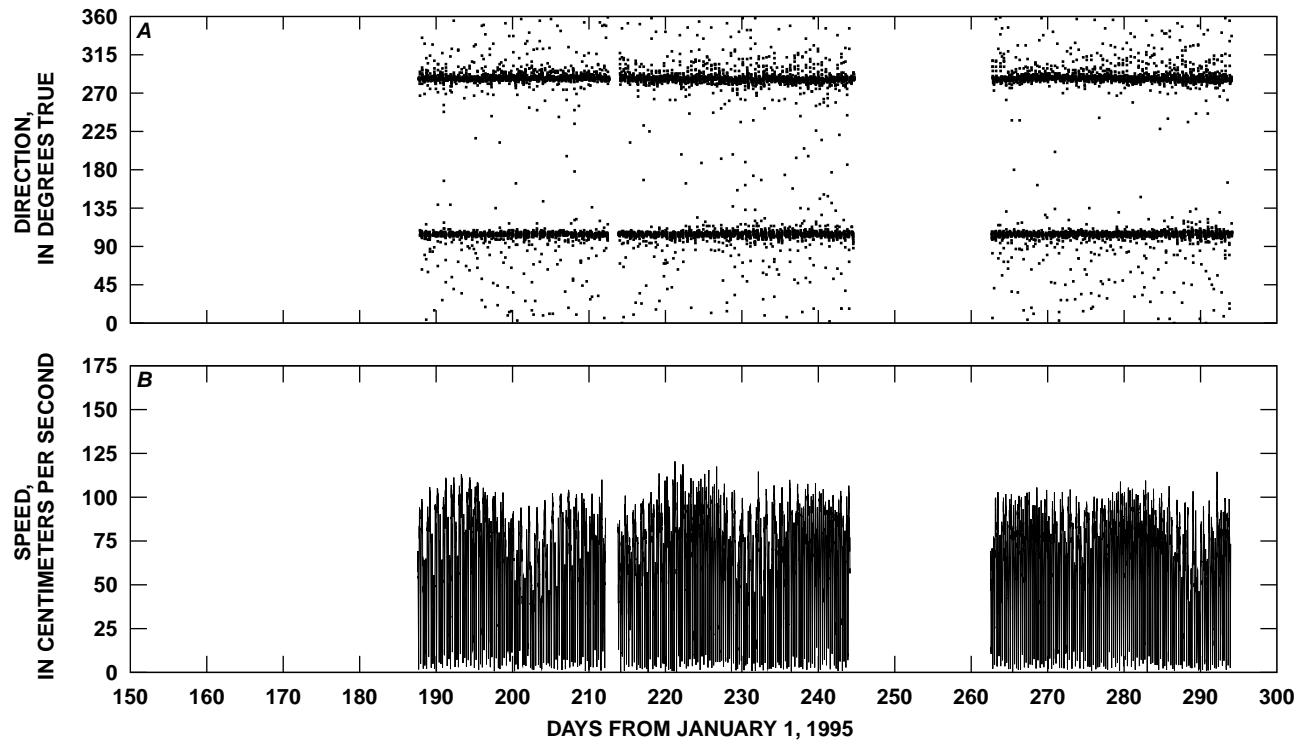

Figure 05. Time-series plots of tidal currents, Station MAL, July 6 through November 16, 1995, BIN 19 near-surface BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

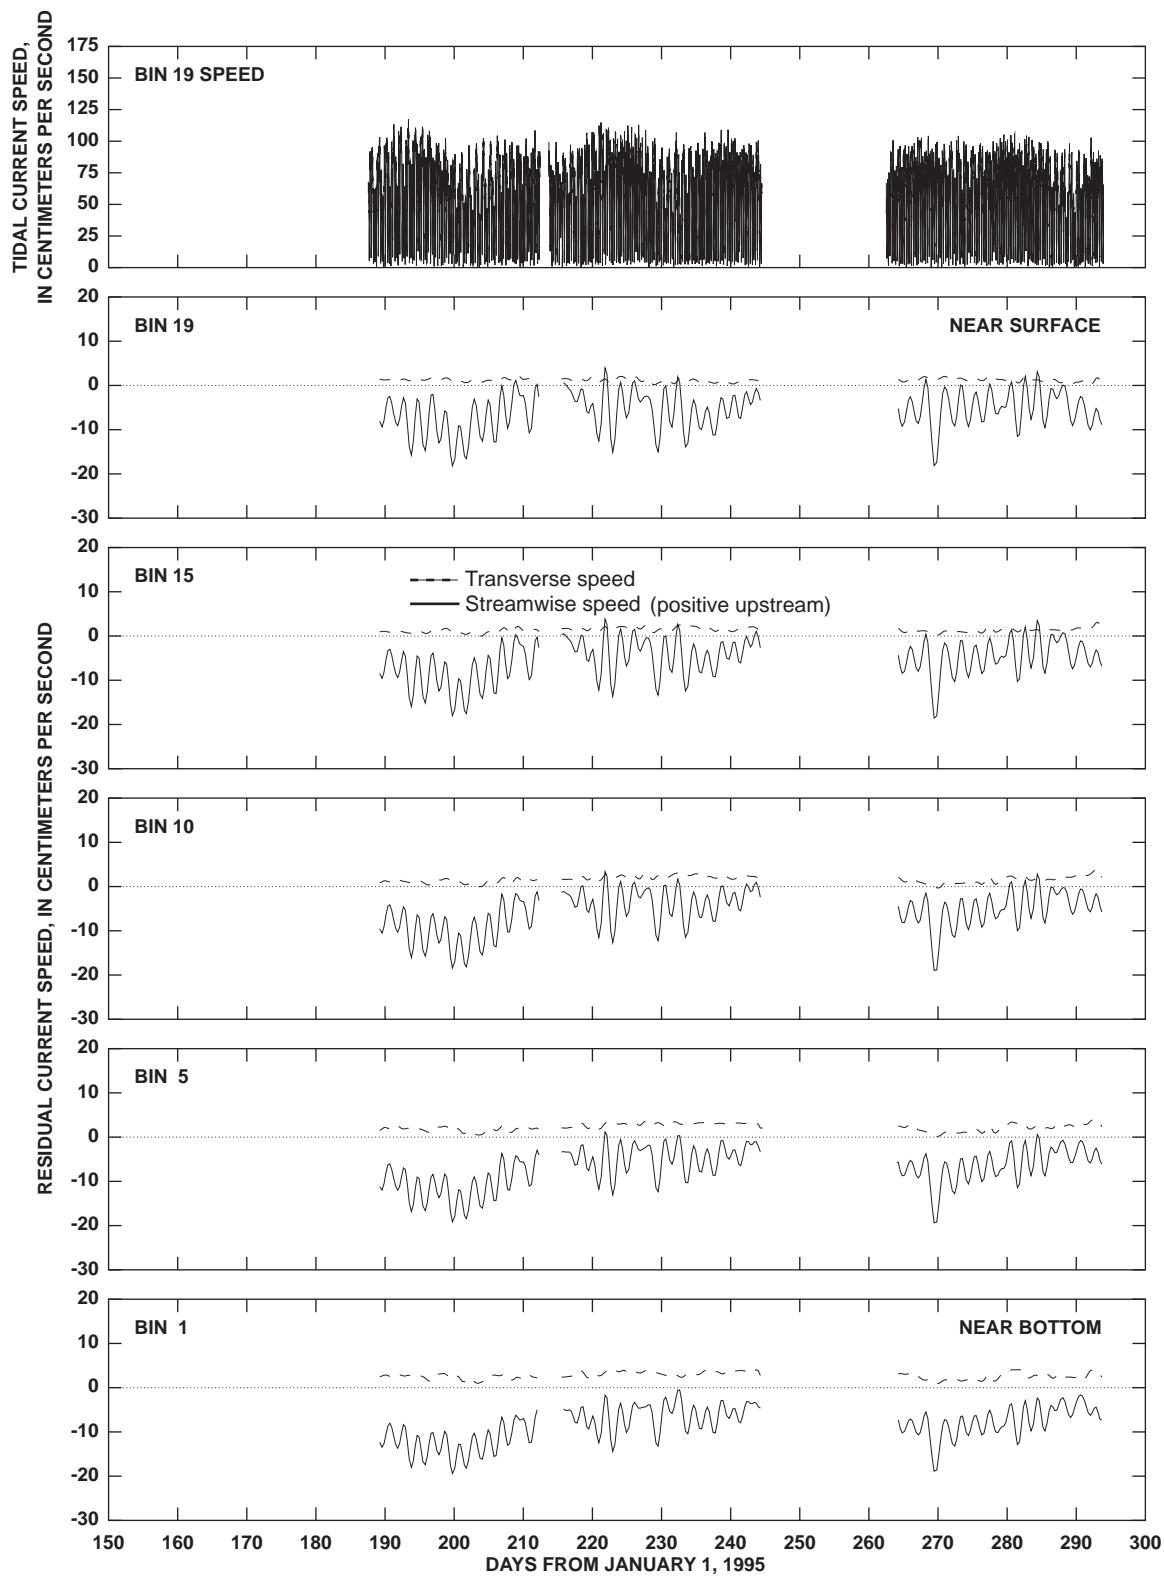

Figure 06. Longitudinal and transverse residual currents, Station MAL, July 6 through November 16, 1995, Suisun Bay, California. Tidal current speed at BIN 19 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 108.2 degrees true.

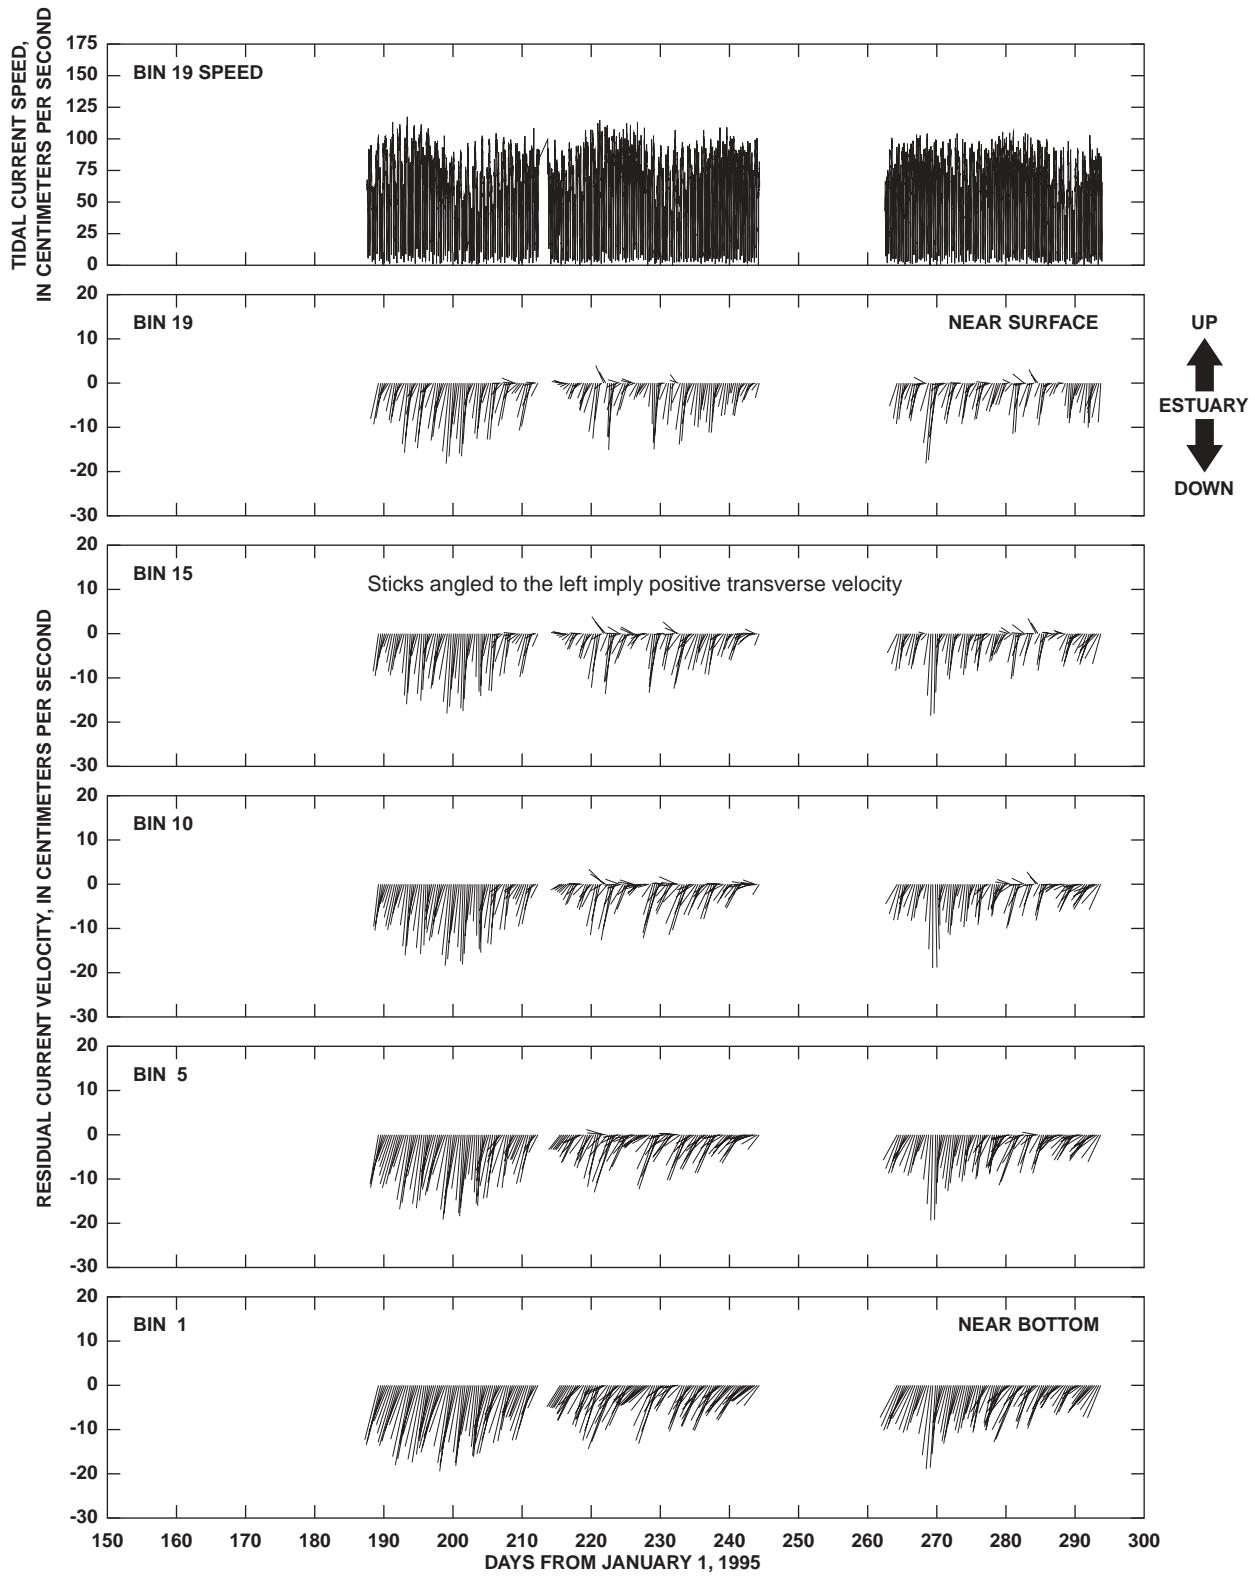

Figure 07. Residual currents, Station MAL, July 6 through November 16, 1995, Suisun Bay, California. Tidal current speed at BIN 19 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 108.2 degrees true.

Table 01. Harmonic analysis results from sea-level measurements, Station MAL, May 8 through October 15, 1995, Suisun Bay, California. Mid-depth sensor. Sea level was measured using a float-driven incremental encoder

Station: MAL

Time series mean: 0.37186

Standard deviation: 0.18156

Harmonic constants: No tidal inference

APPENDIX P—STATION MART

Station Name: **MART**
(Near Martinez)

Position: Lat. $38^{\circ}01'40''$
Long. $122^{\circ}08'22''$
Depth: 8.0 m (MLLW)

	Manufacturer	Serial Number	Deployment Dates
CT _t :	DWR	XX	5/1/95(121) - 11/1/95(305)
CT _b :	DWR	XX	5/1/95(121) - 11/1/95(305)

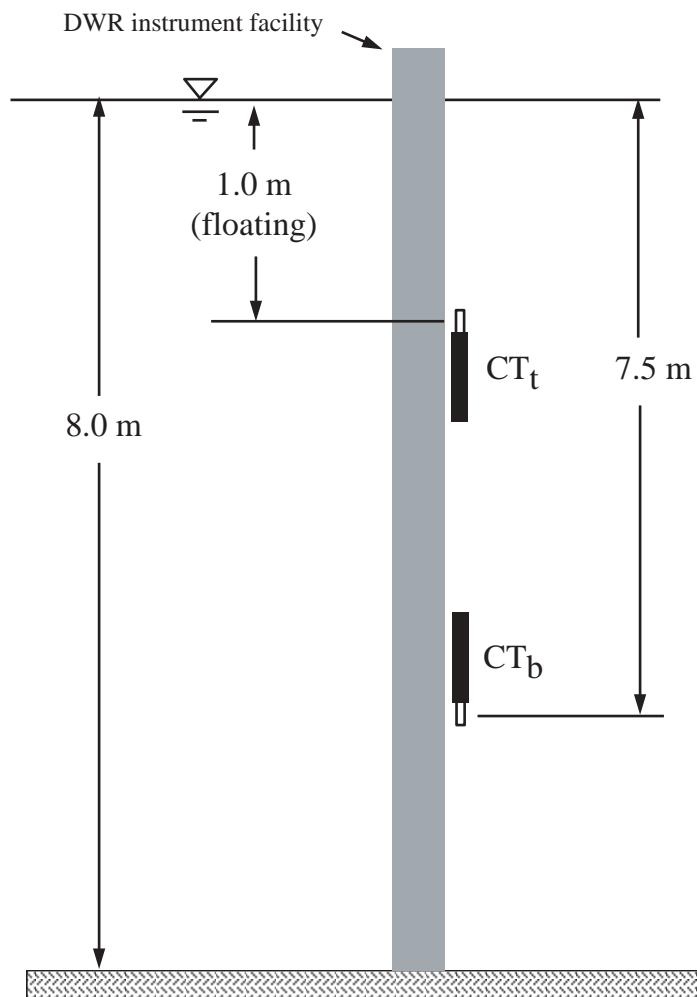

Figure P1. Configuration of instrument deployment, Station MART, May 1 through November 1, 1995, Suisun Bay, California. m, meters; MLLW, mean lower low water; CT, conductivity-temperature; DWR, California Department of Water Resources.

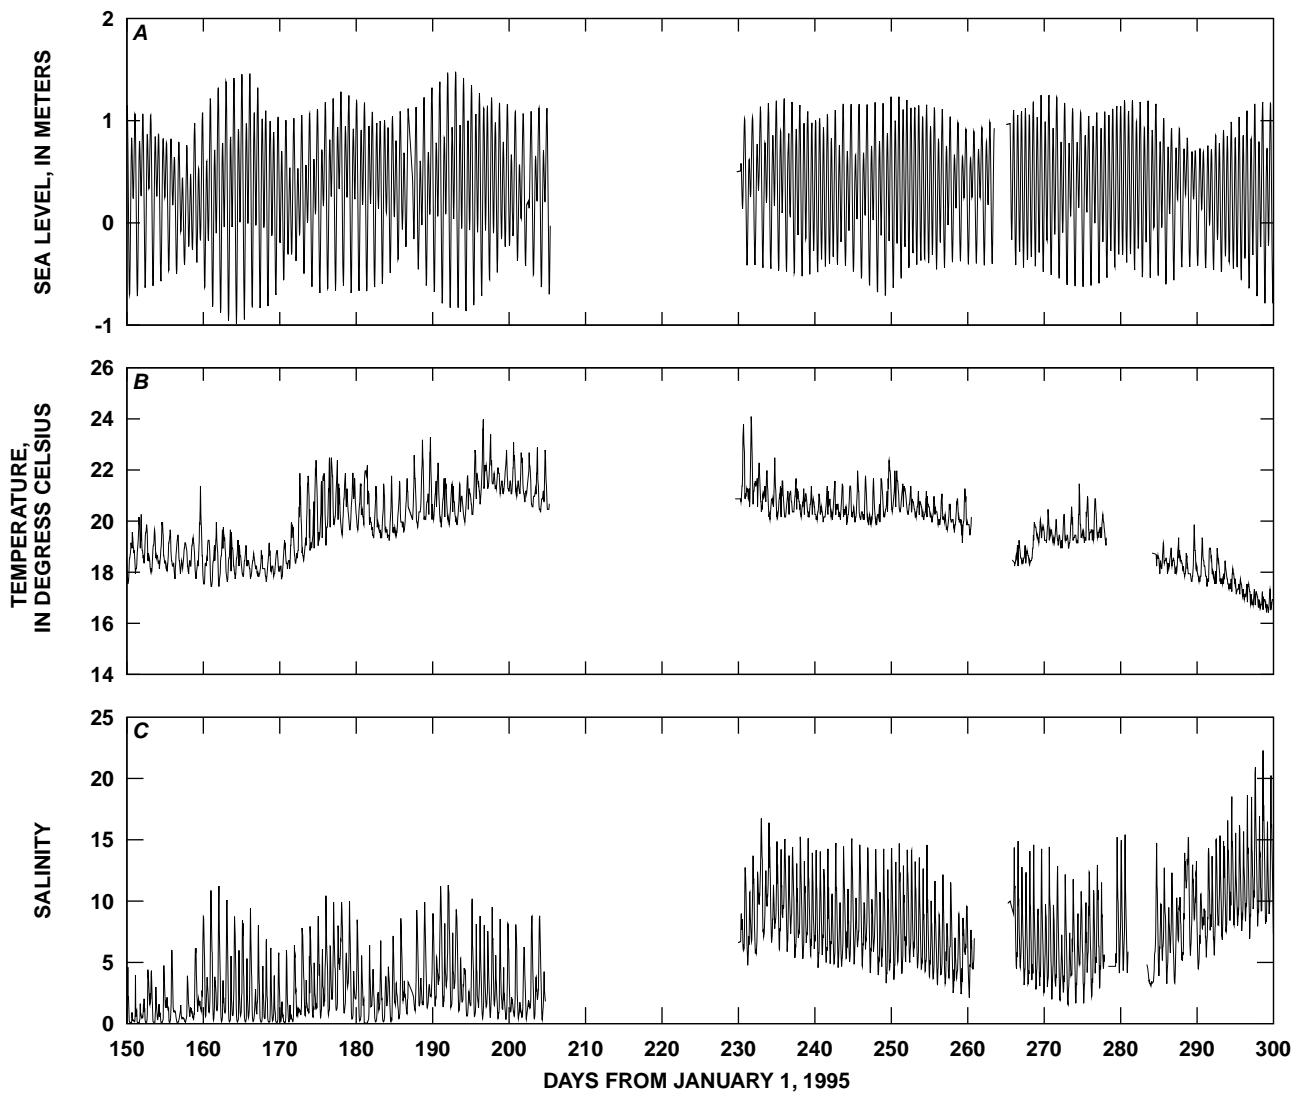

Figure P2. Time-series plots of *A*, sea level; *B*, temperature; and *C*, salinity, Station MART, May 1 through November 1, 1995, Suisun Bay, California. Near-surface sensor. Sea level was measured using a float-driven incremental encoder. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

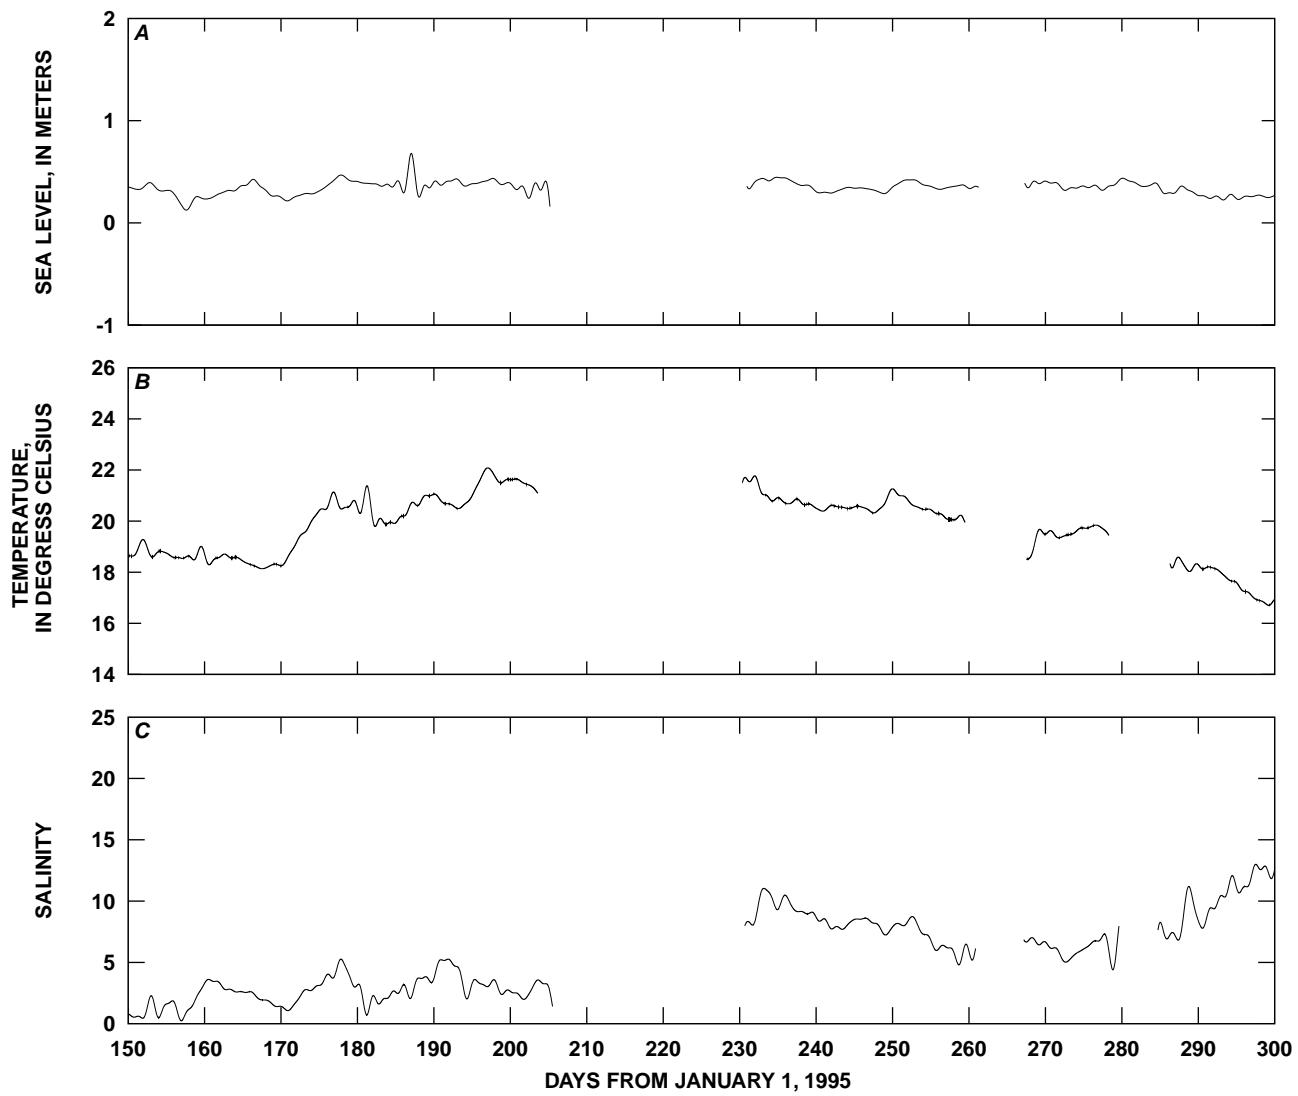

Figure P3. Time-series plots of low-pass-filtered *A*, sea level; *B*, temperature; and *C*, salinity, Station MART, May 1 through November 1, 1995, Suisun Bay, California. Near-surface sensor. Sea level was measured using a float-driven incremental encoder. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

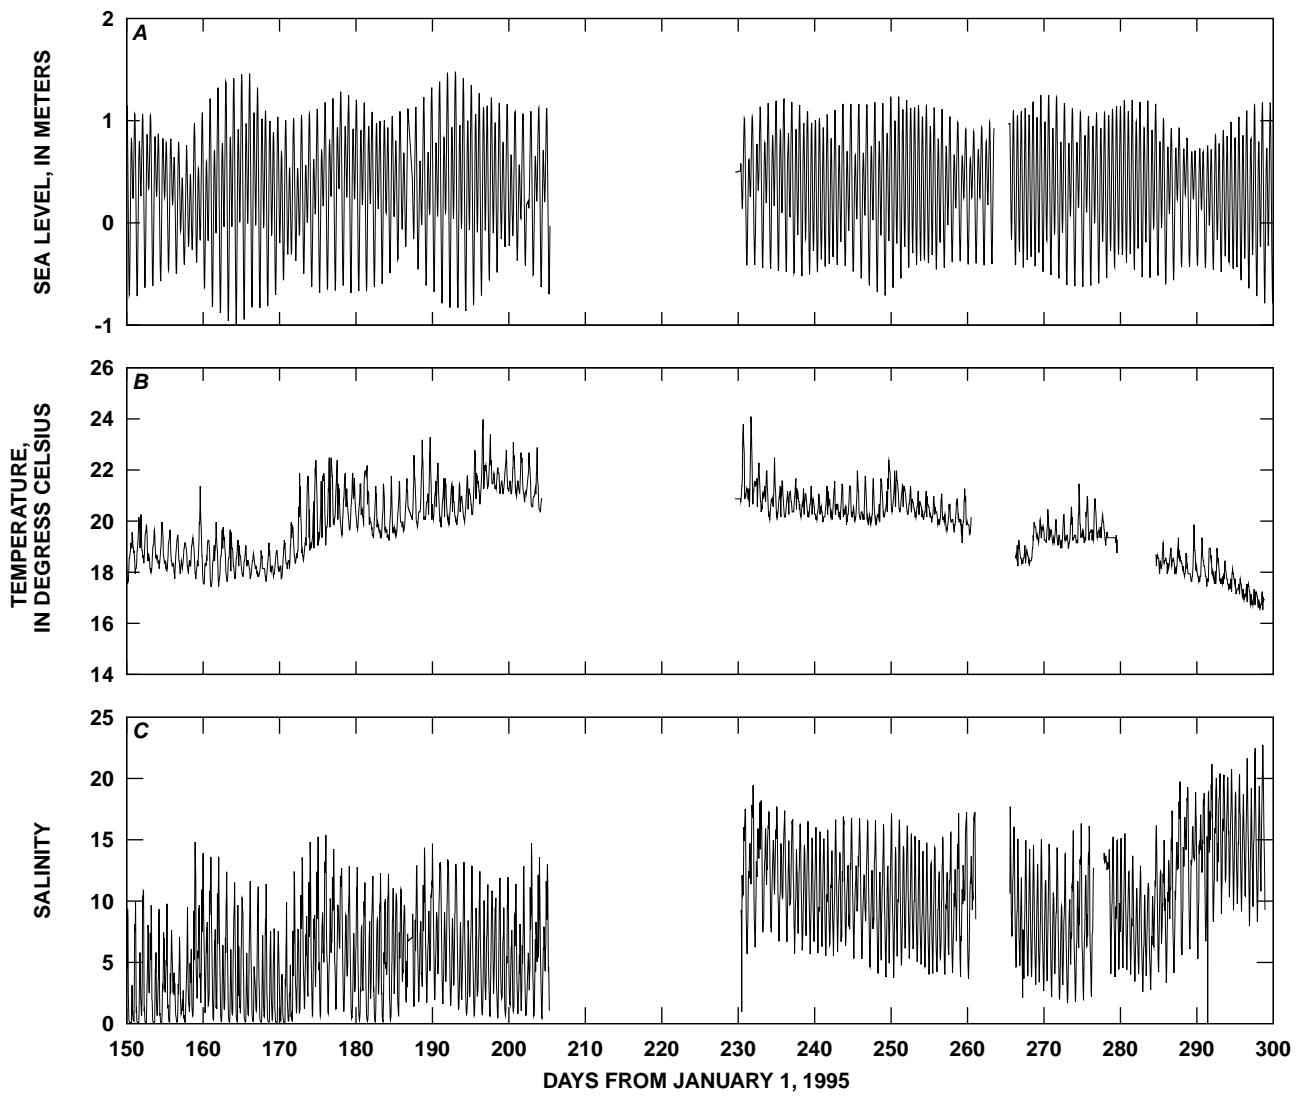

Figure P4. Time-series plots of *A*, sea level; *B*, temperature; and *C*, salinity, Station MART, May 1 through November 1, 1995, Suisun Bay, California. Near-bottom sensor. Sea level was measured using a float-driven incremental encoder. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

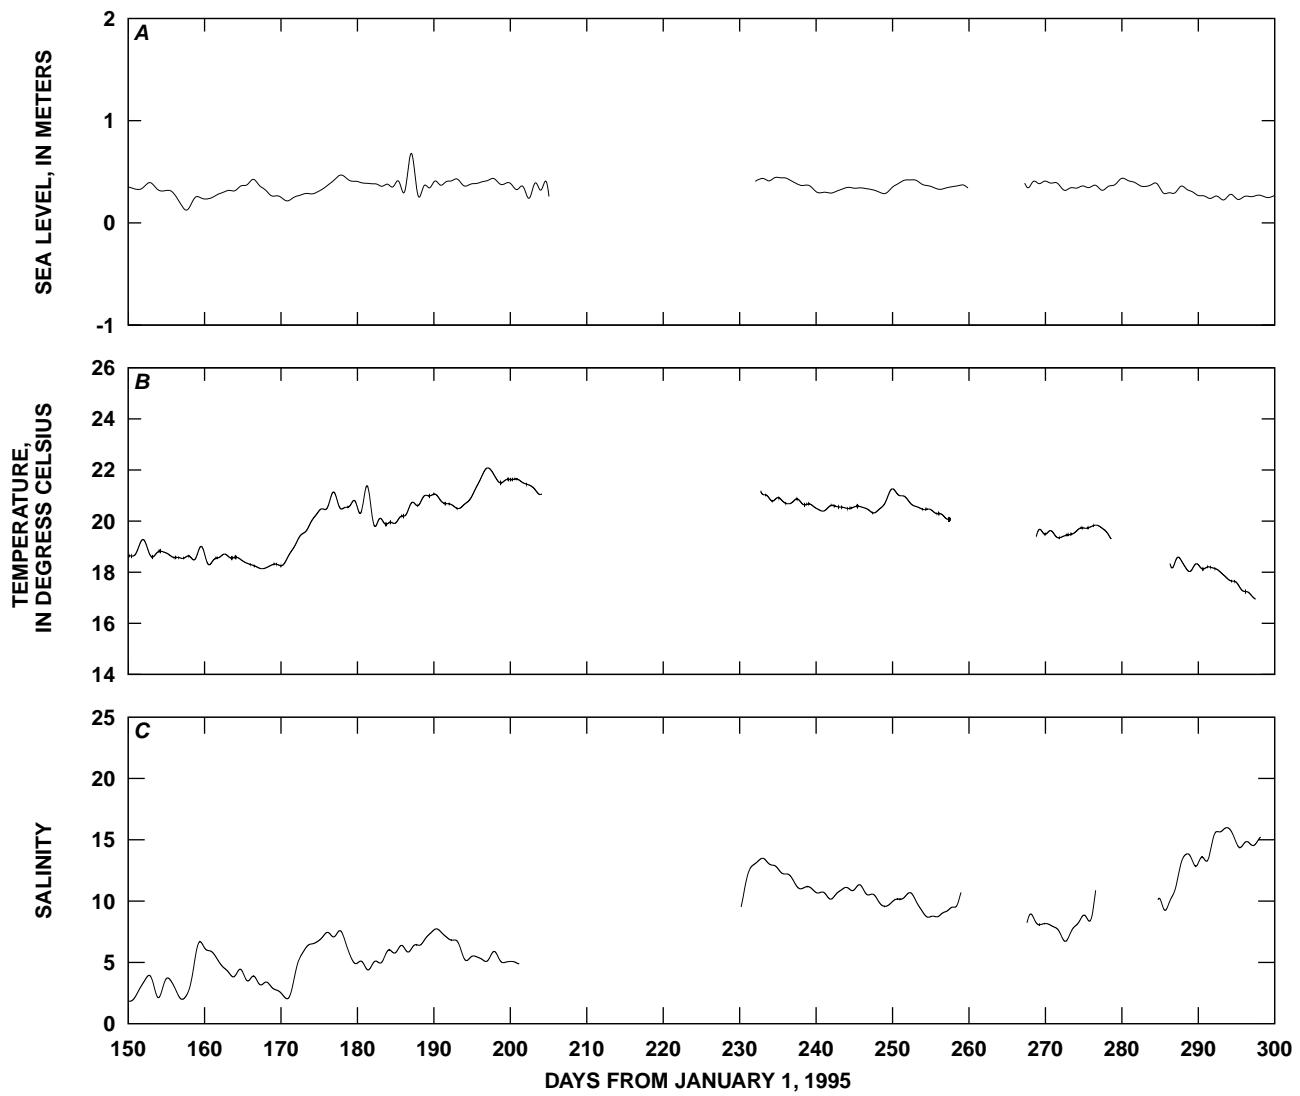

Figure P5. Time-series plots of low-pass-filtered *A*, sea level; *B*, temperature; and *C*, salinity, Station MART, May 1 through November 1, 1995, Suisun Bay, California. Near-bottom sensor. Sea level was measured using a float-driven incremental encoder. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

Table P1. Harmonic analysis results from sea-level measurements, Station MART, May 1 through November 1, 1995, Suisun Bay, California. Mid-depth sensor. Sea level was measured using a float-driven incremental encoder

STATION: MART

Time series mean: 0.33821

Standard deviation: 0.20934

Harmonic constants: No tidal inference

Ocean Sensors	OS200 282	8/10/95(222) - 10/23/95(296)
ADCP: RDI	BB 1269	6/1/95(152) - 8/10/95(222)
ADCP: RDI	NB 296	8/10/95(222) - 10/23/95(296)

Serviced: 6/1/95(152), 7/7/95(188), 7/13/95(194), 7/21/95(202), 8/10/95(222), 9/30/95(273),
10/23/95(296)

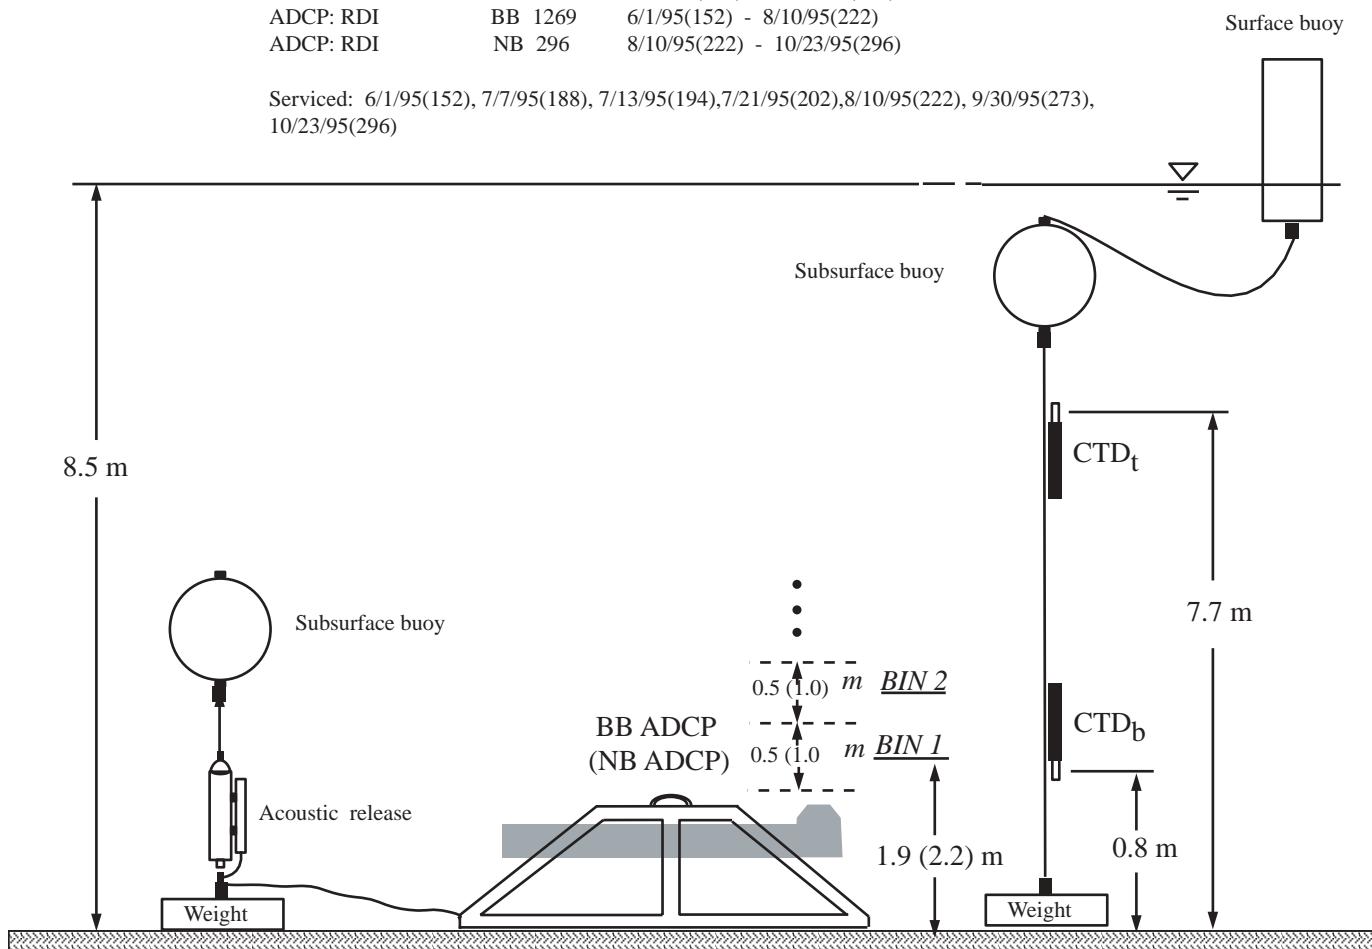

Figure Q1. Configuration of instrument deployment, Station MID, June 1 through October 23, 1995, Suisun Bay, California. m, meters; MLLW, mean lower low water; ADCP, acoustic Doppler current profiler; RDI, R.D. Instruments, Inc.; NB ADCP, narrow-band acoustic Doppler current profiler; BB ADCP, broad-band acoustic Doppler current profiler; CTD, conductivity-temperature-depth; BIN, a discrete measurement location in the vertical.

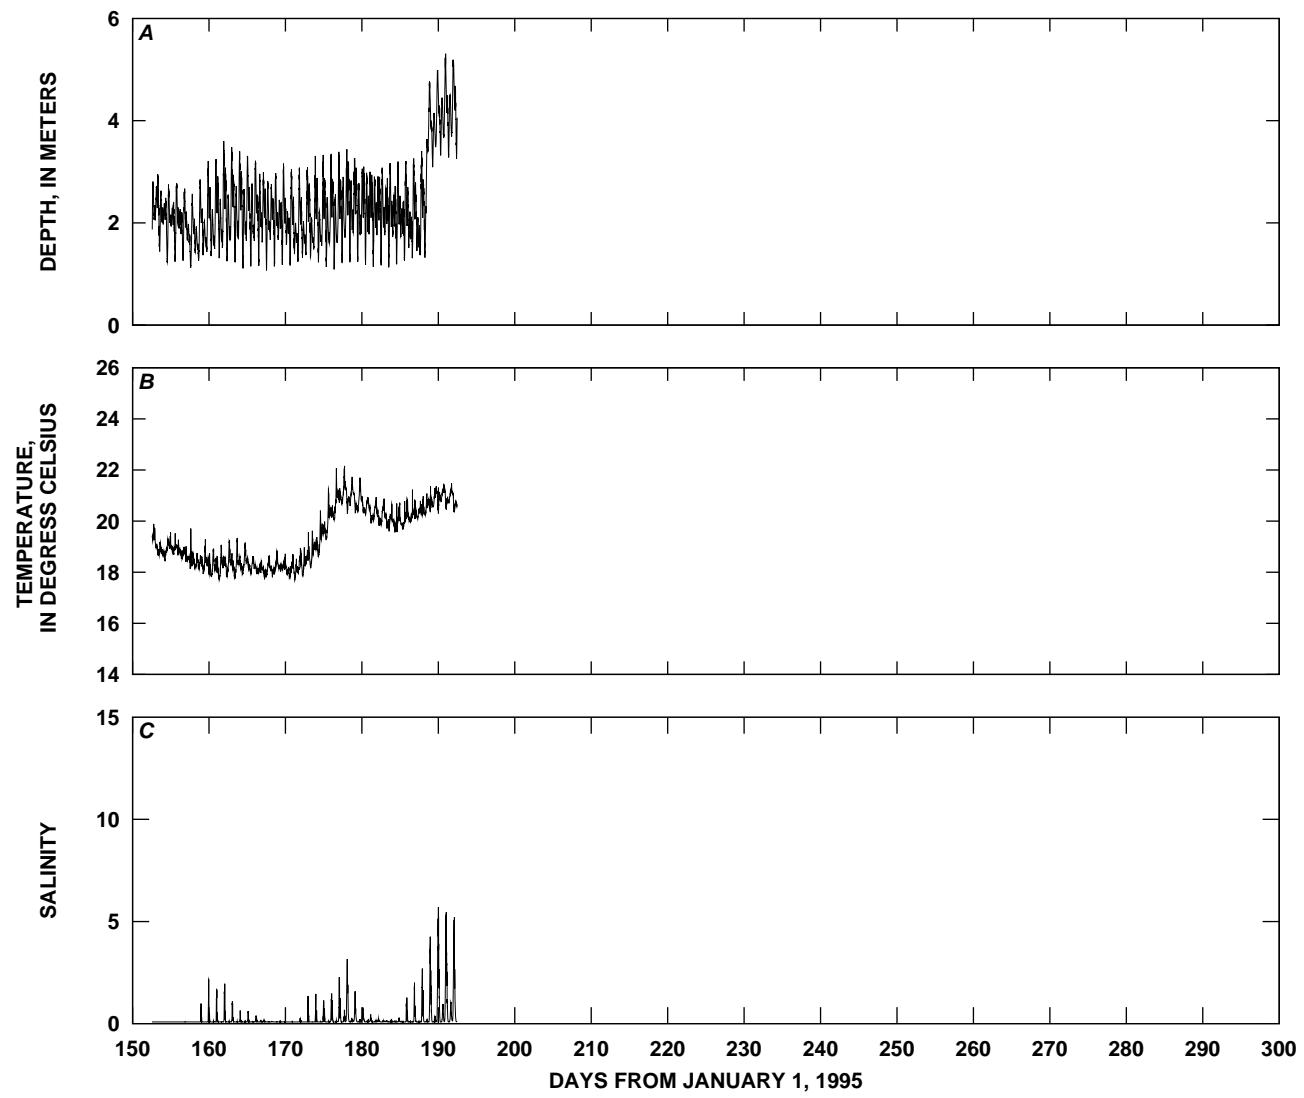

Figure Q2. Time-series plots of *A*, depth; *B*, temperature; and *C*, salinity, Station MID, June 1 through July 13, 1995, Suisun Bay, California. Near-surface sensor. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

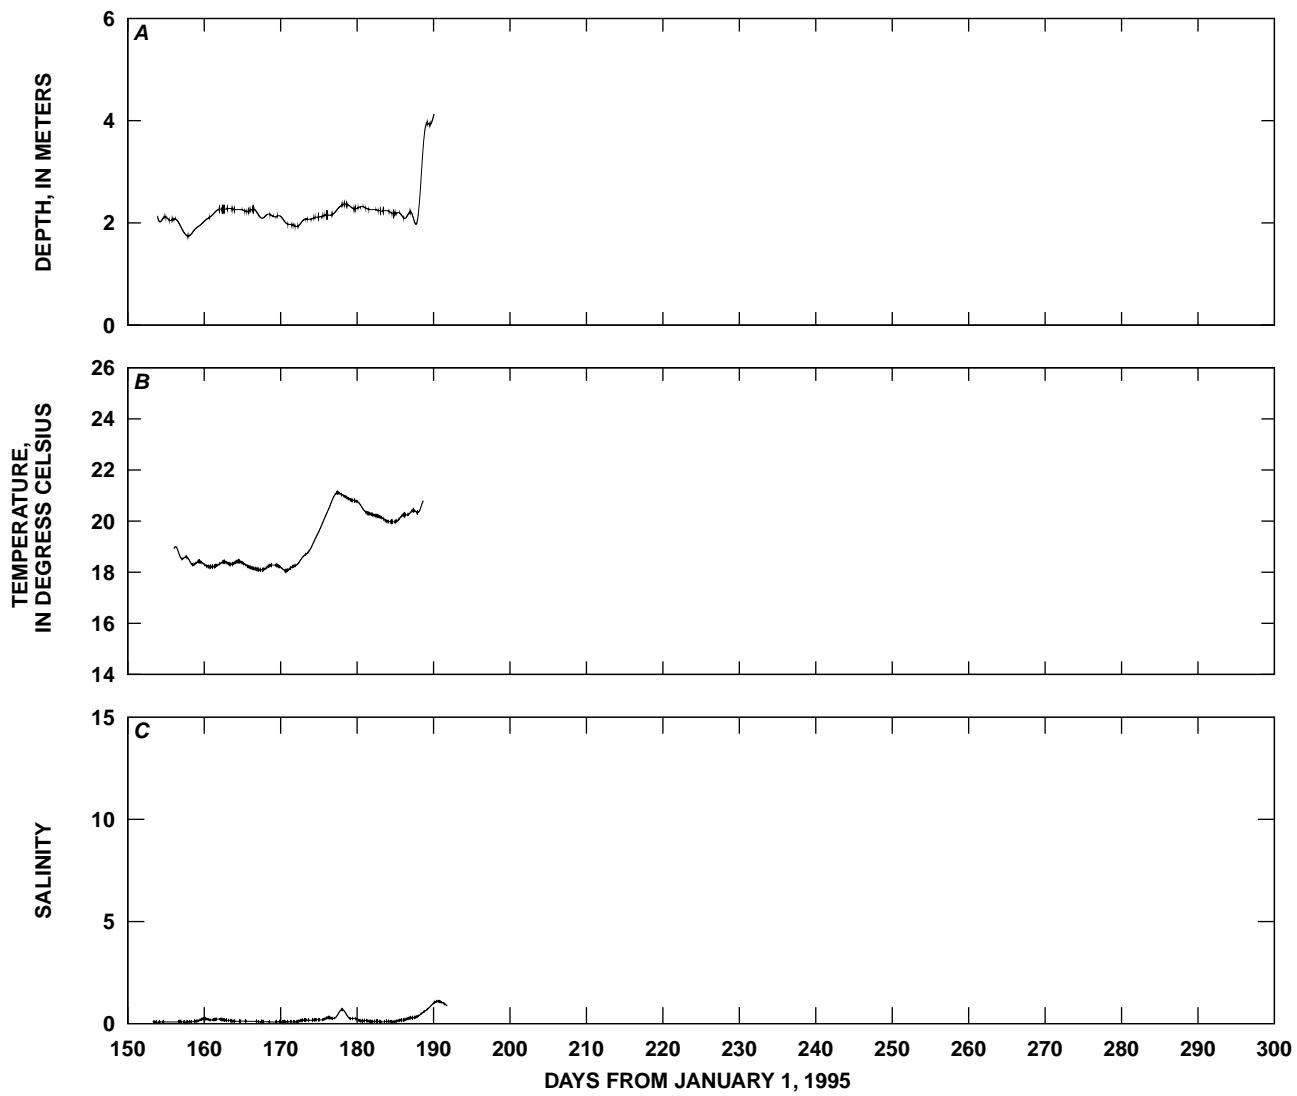

Figure Q3. Time-series plots of low-pass-filtered *A*, depth; *B*, temperature; and *C*, salinity, Station MID, June 1 through July 13, 1995, Suisun Bay, California. Near-surface sensor. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

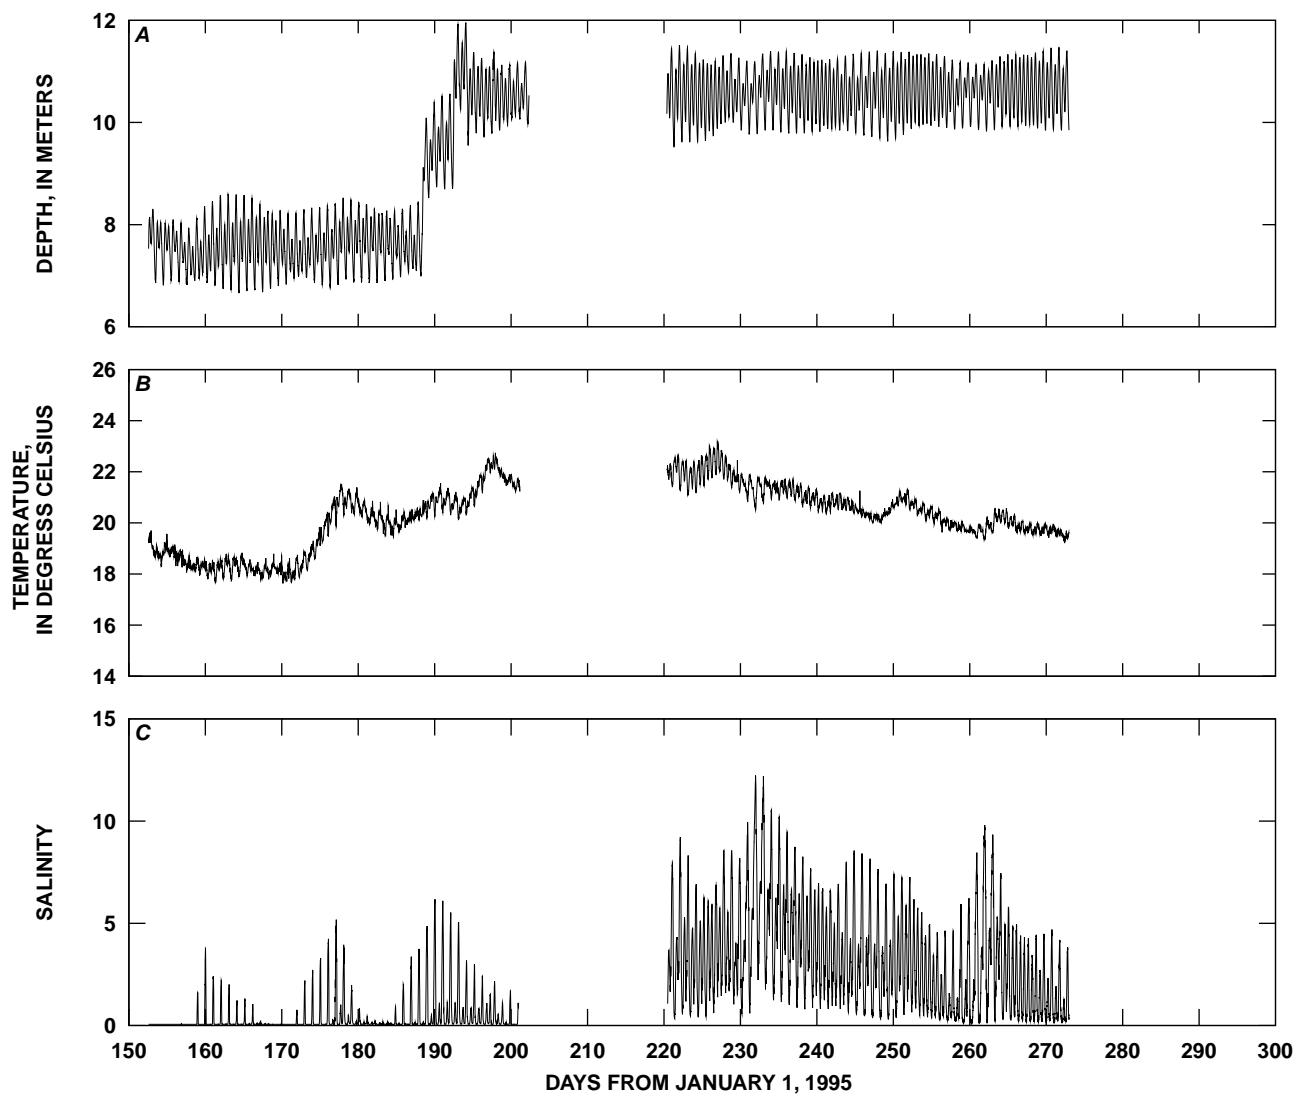

Figure Q4. Time-series plots of *A*, depth; *B*, temperature; and *C*, salinity, Station MID, June 1 through October 23, 1995, Suisun Bay, California. Near-bottom sensor. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

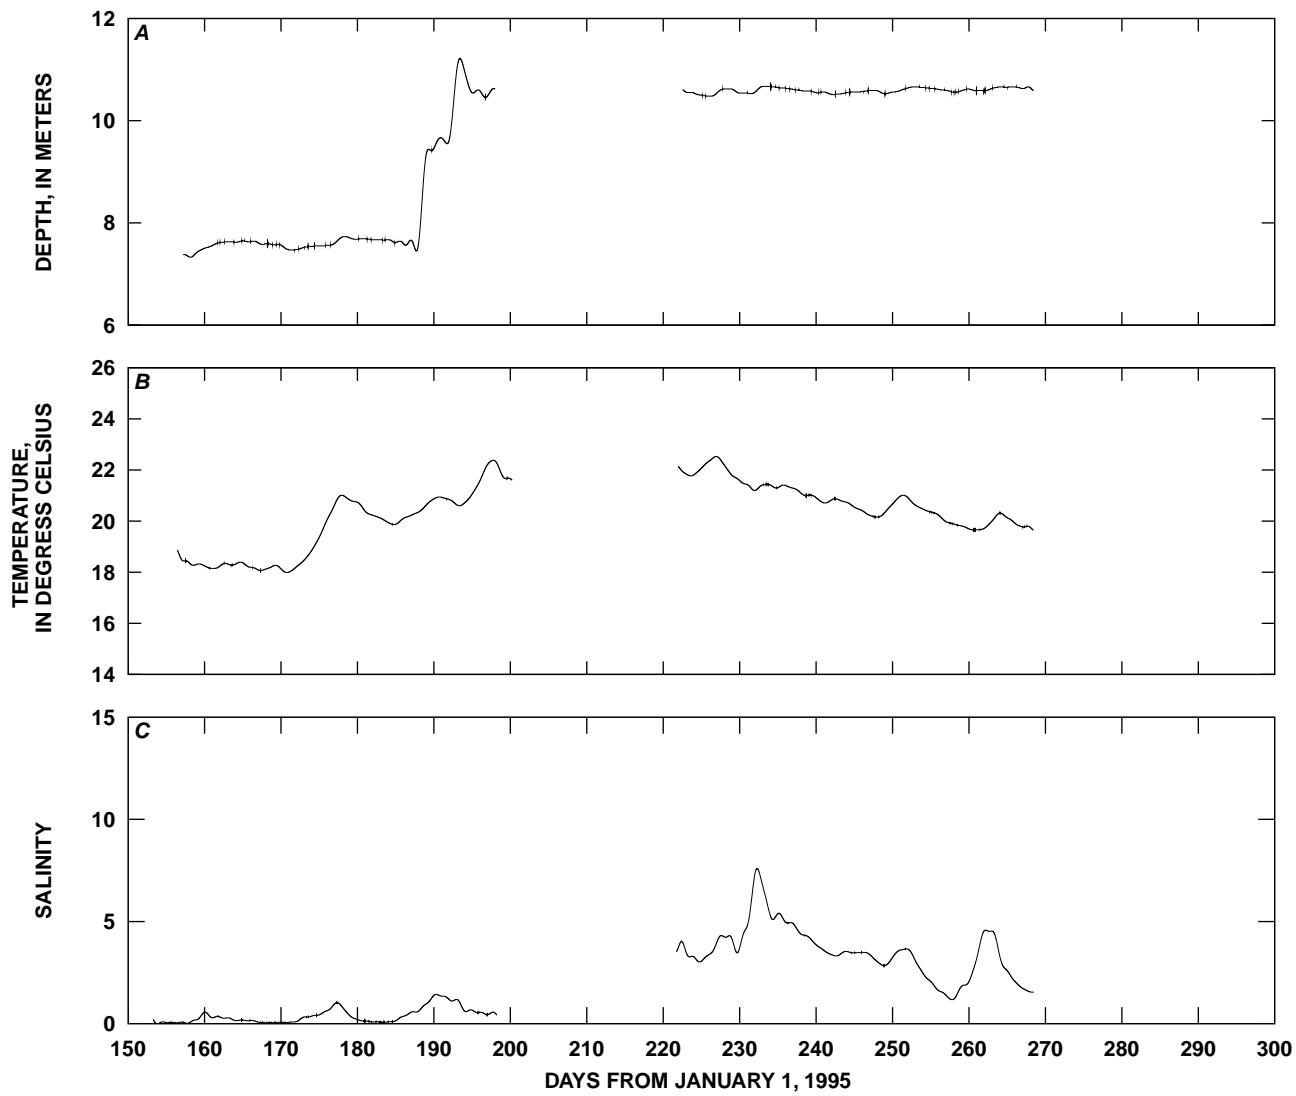

Figure Q5. Time-series plots of low-pass-filtered *A*, depth; *B*, temperature; and *C*, salinity, Station MID, June 1 through October 23, 1995, Suisun Bay, California. Near-bottom sensor. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

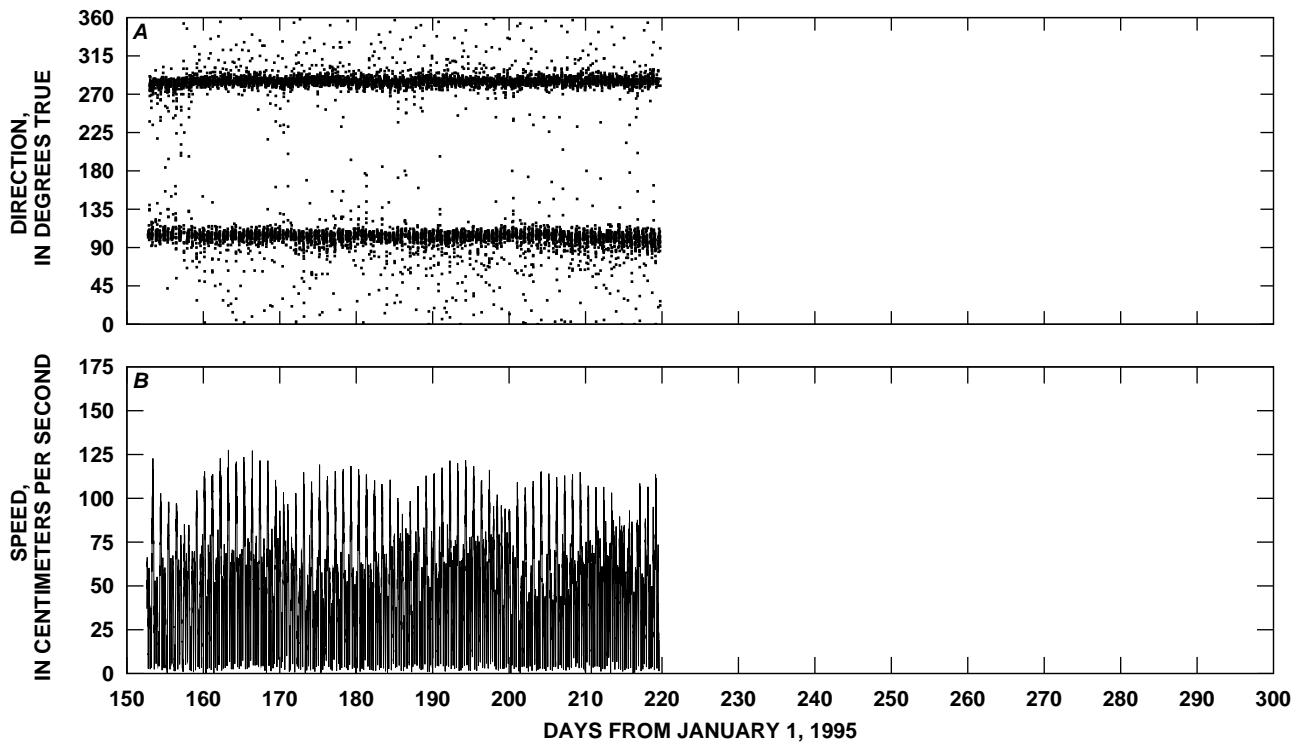

Figure Q6. Time-series plots of tidal currents, Station MID, June 1 through August 10, 1995, BIN 1 near-bottom BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

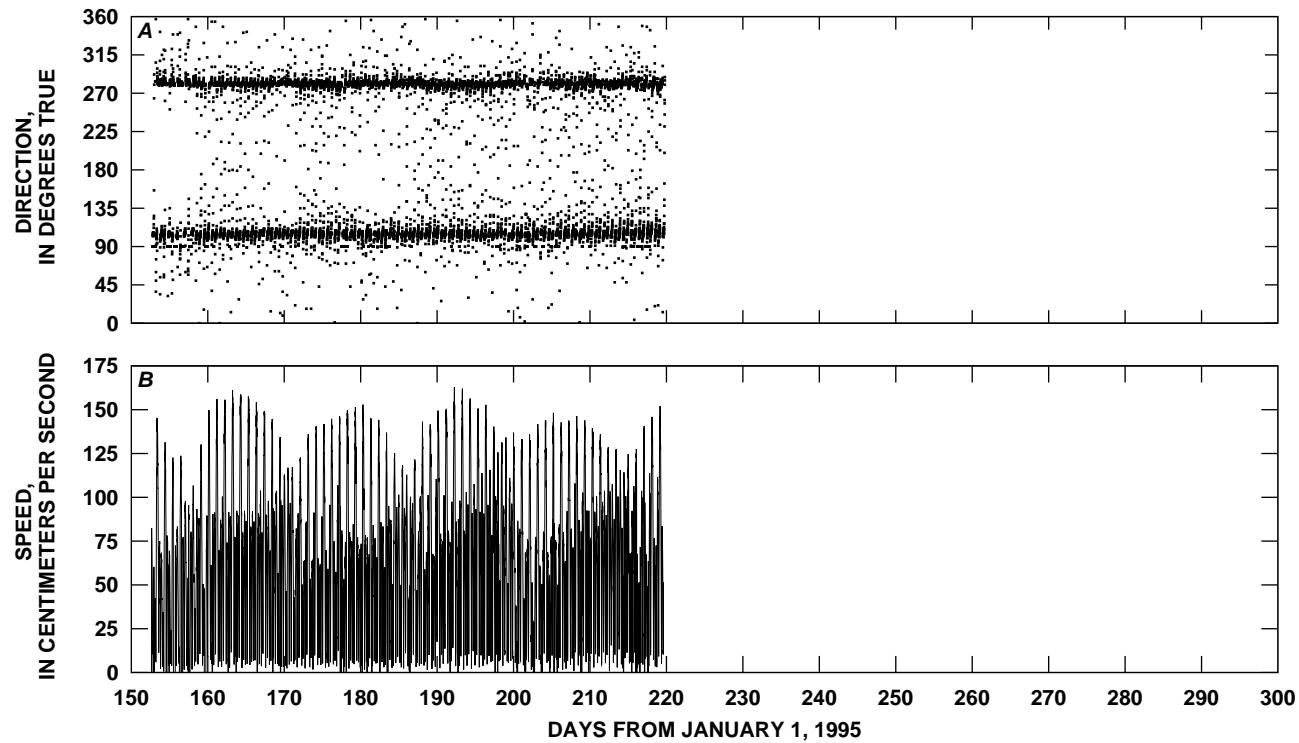

Figure Q7. Time-series plots of tidal currents, Station MID, June 1 through August 10, 1995, BIN 19 near-surface BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

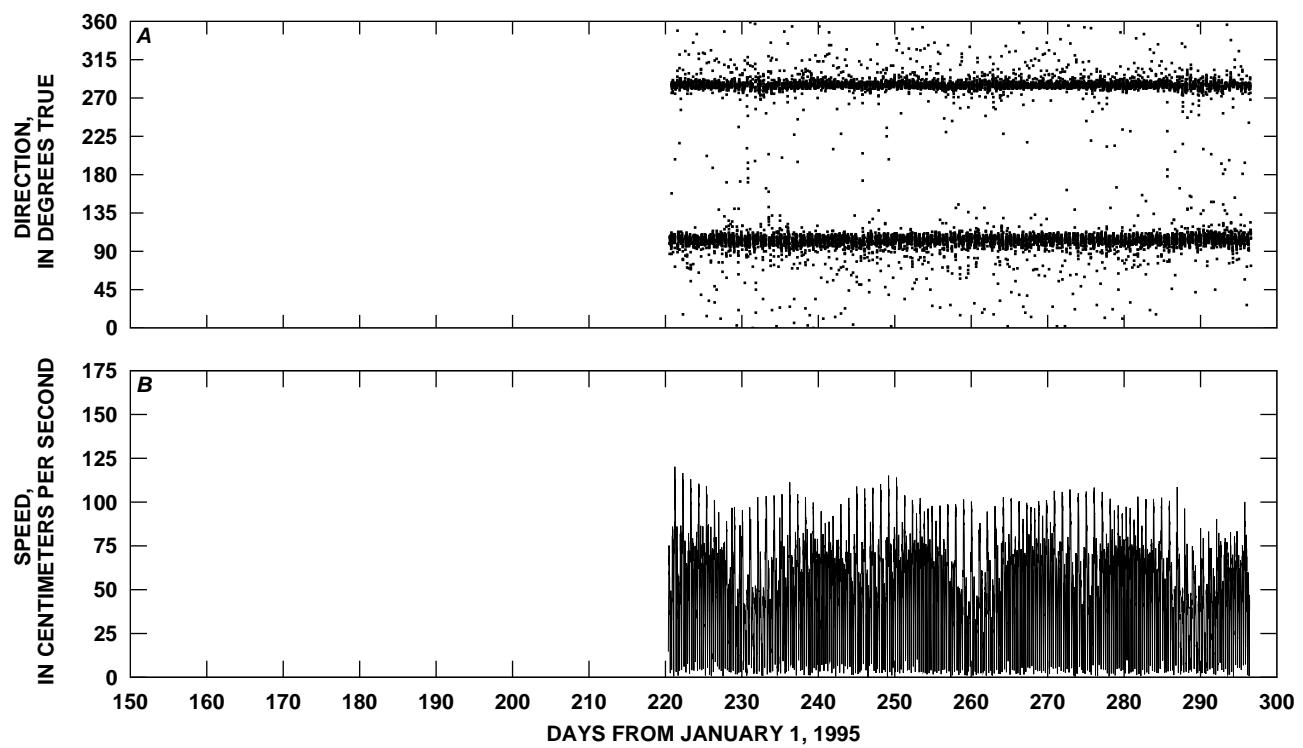

Figure Q8. Time-series plots of tidal currents, Station MID, August 10 through October 23, 1995, BIN 1 near-bottom BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

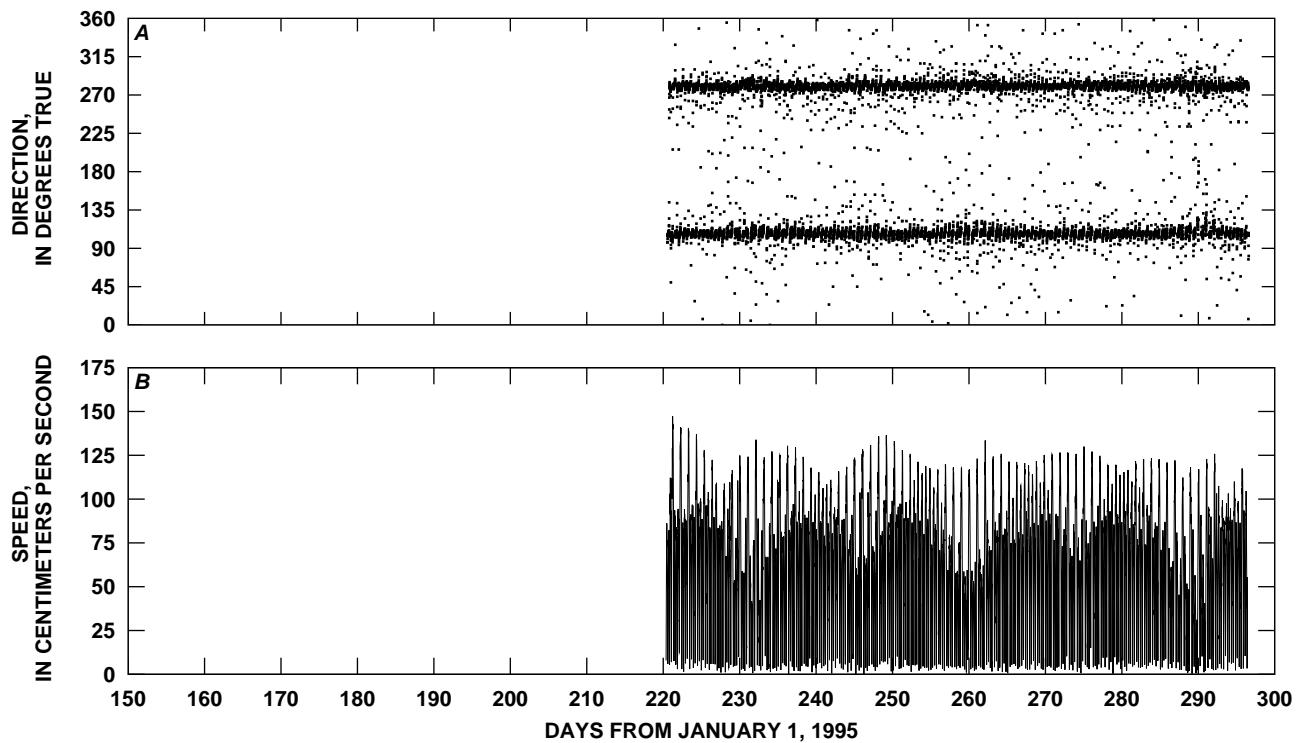

Figure Q9. Time-series plots of tidal currents, Station MID, August 10 through October 23, 1995, BIN 7 near-surface BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

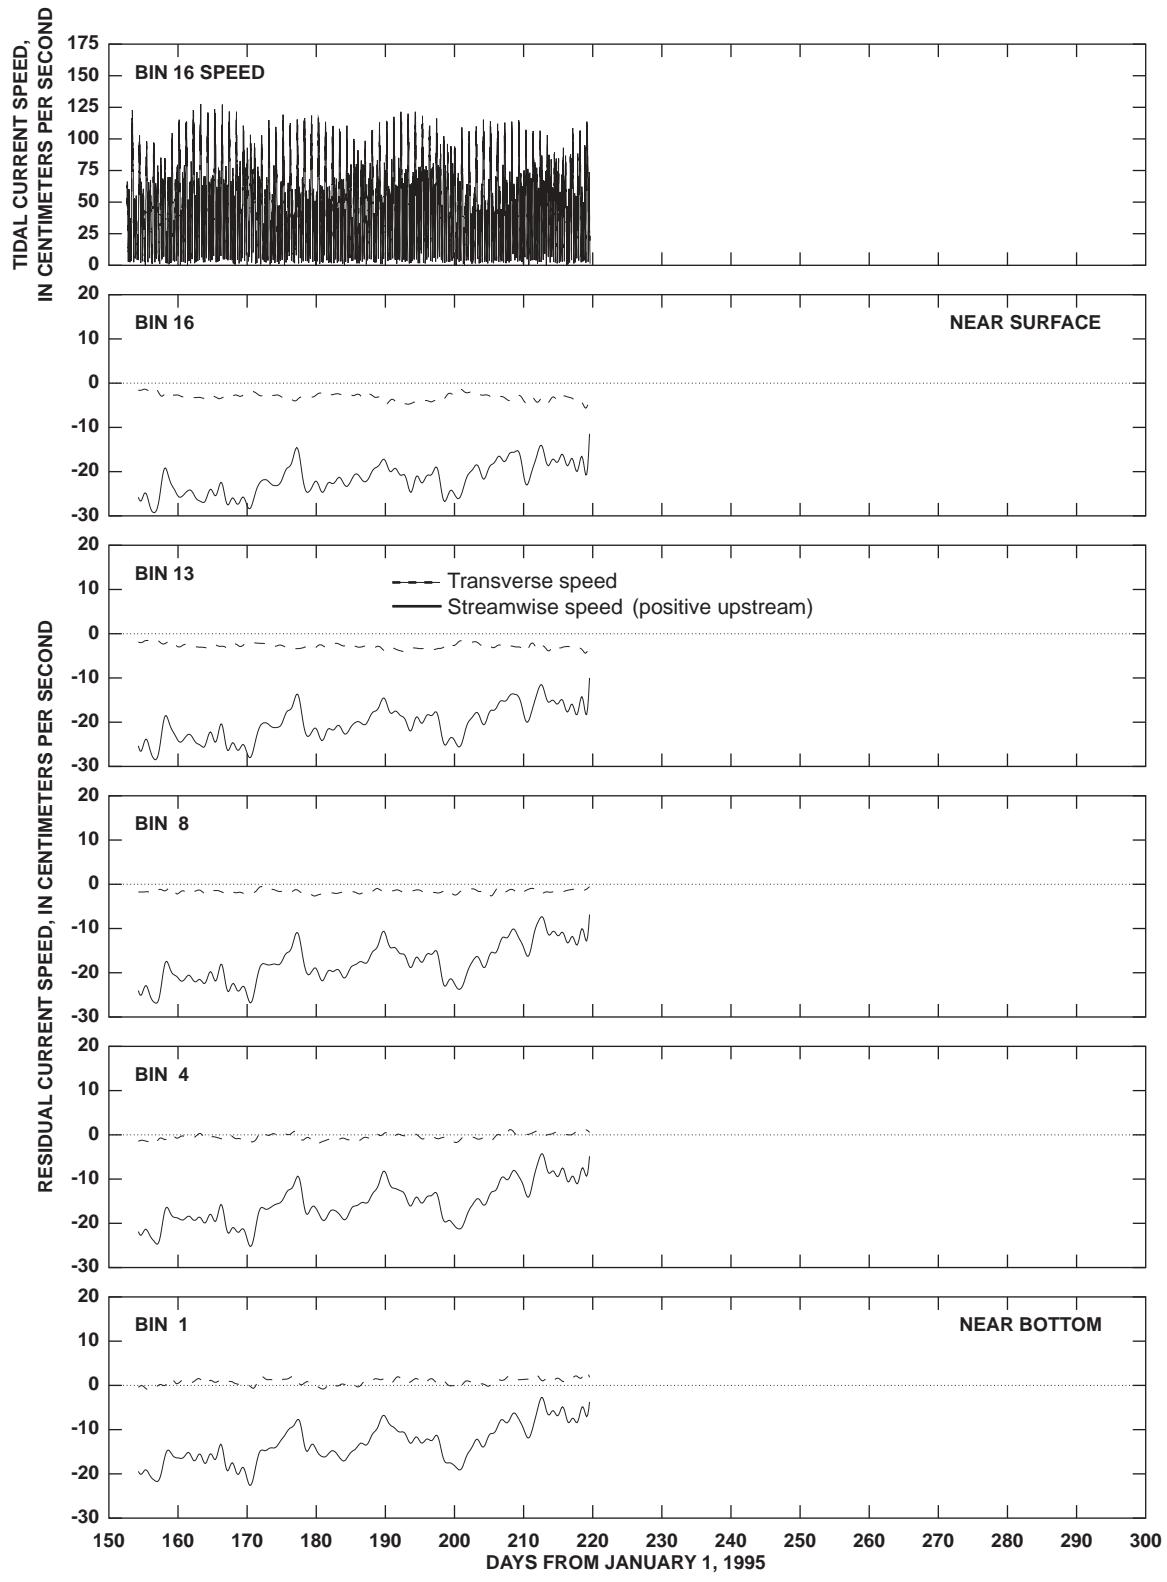

Figure Q10. Longitudinal and transverse residual currents, Station MID, June 1 through August 10, 1995, Suisun Bay, California. Tidal current speed at BIN 19 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 103.7 degrees true.

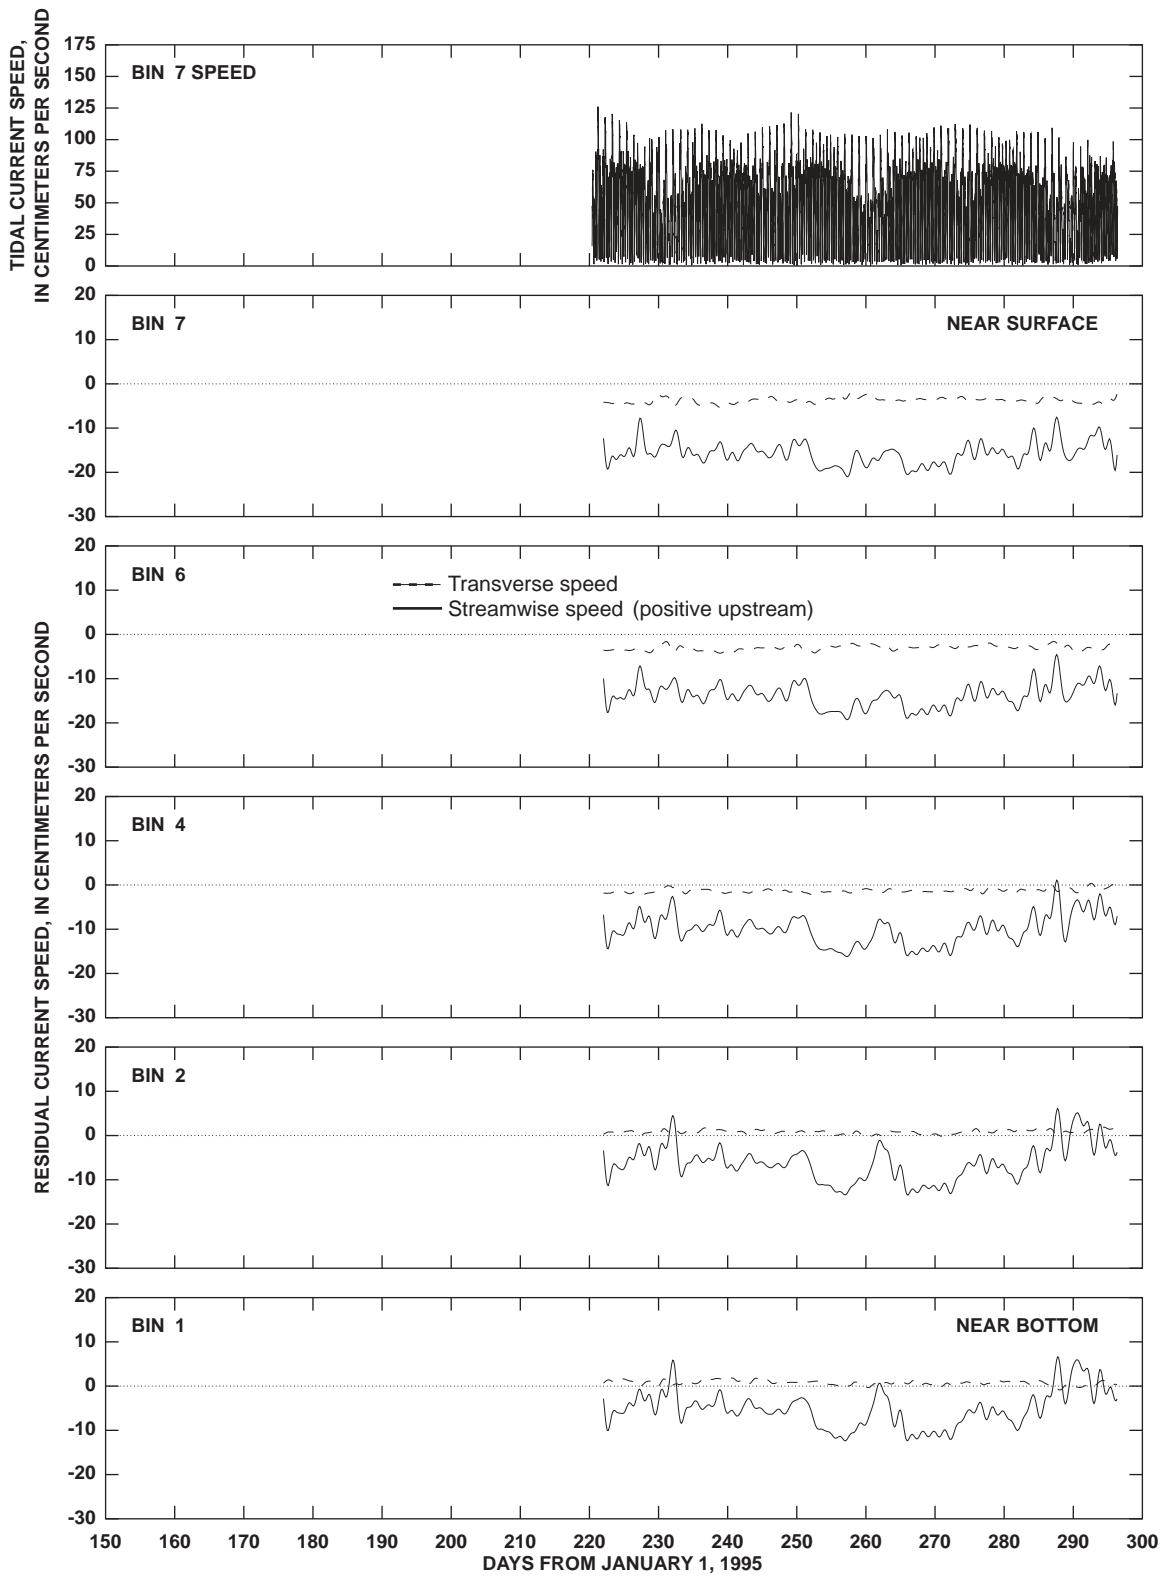

Figure Q11. Longitudinal and transverse residual currents, Station MID, August 10 through October 23, 1995, Suisun Bay, California. Tidal current speed at BIN 7 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 103.0 degrees true.

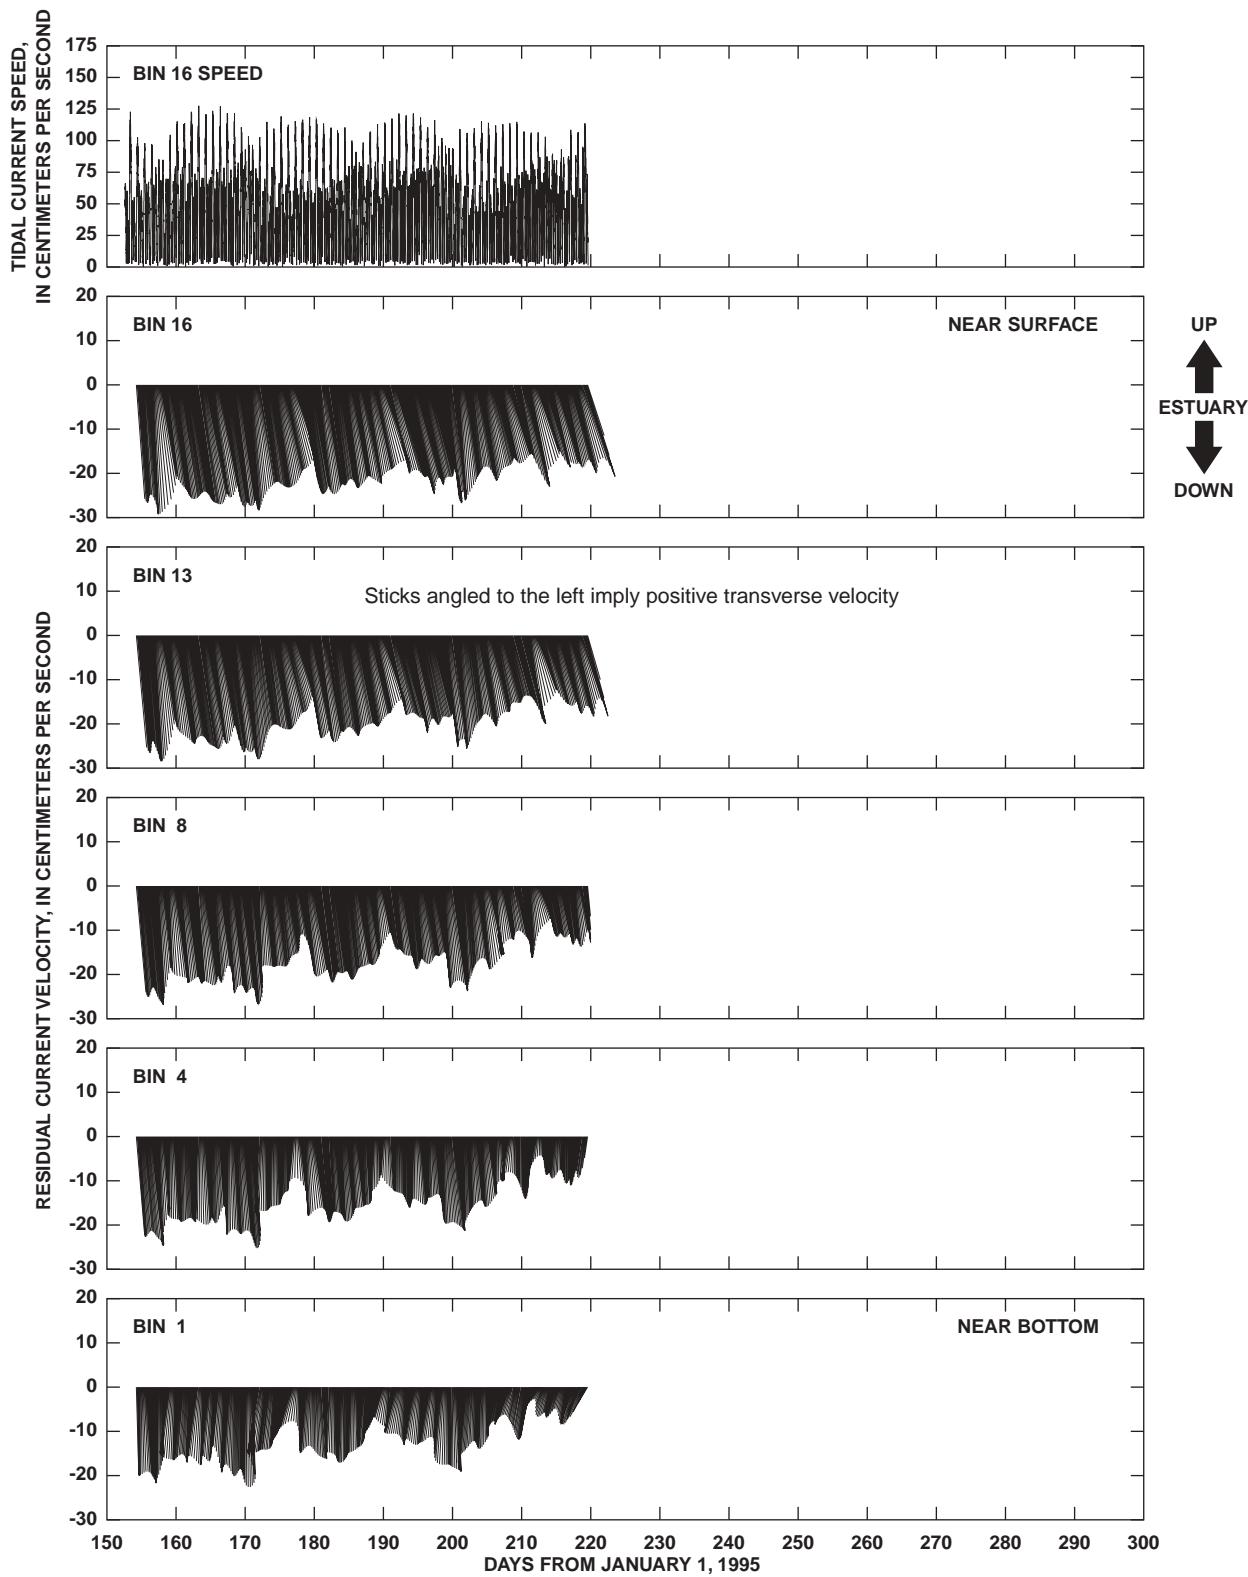

Figure Q12. Residual currents, Station MID, June 1 through August 10, 1995, Suisun Bay, California. Tidal current speed at BIN 19 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 103.7 degrees true.

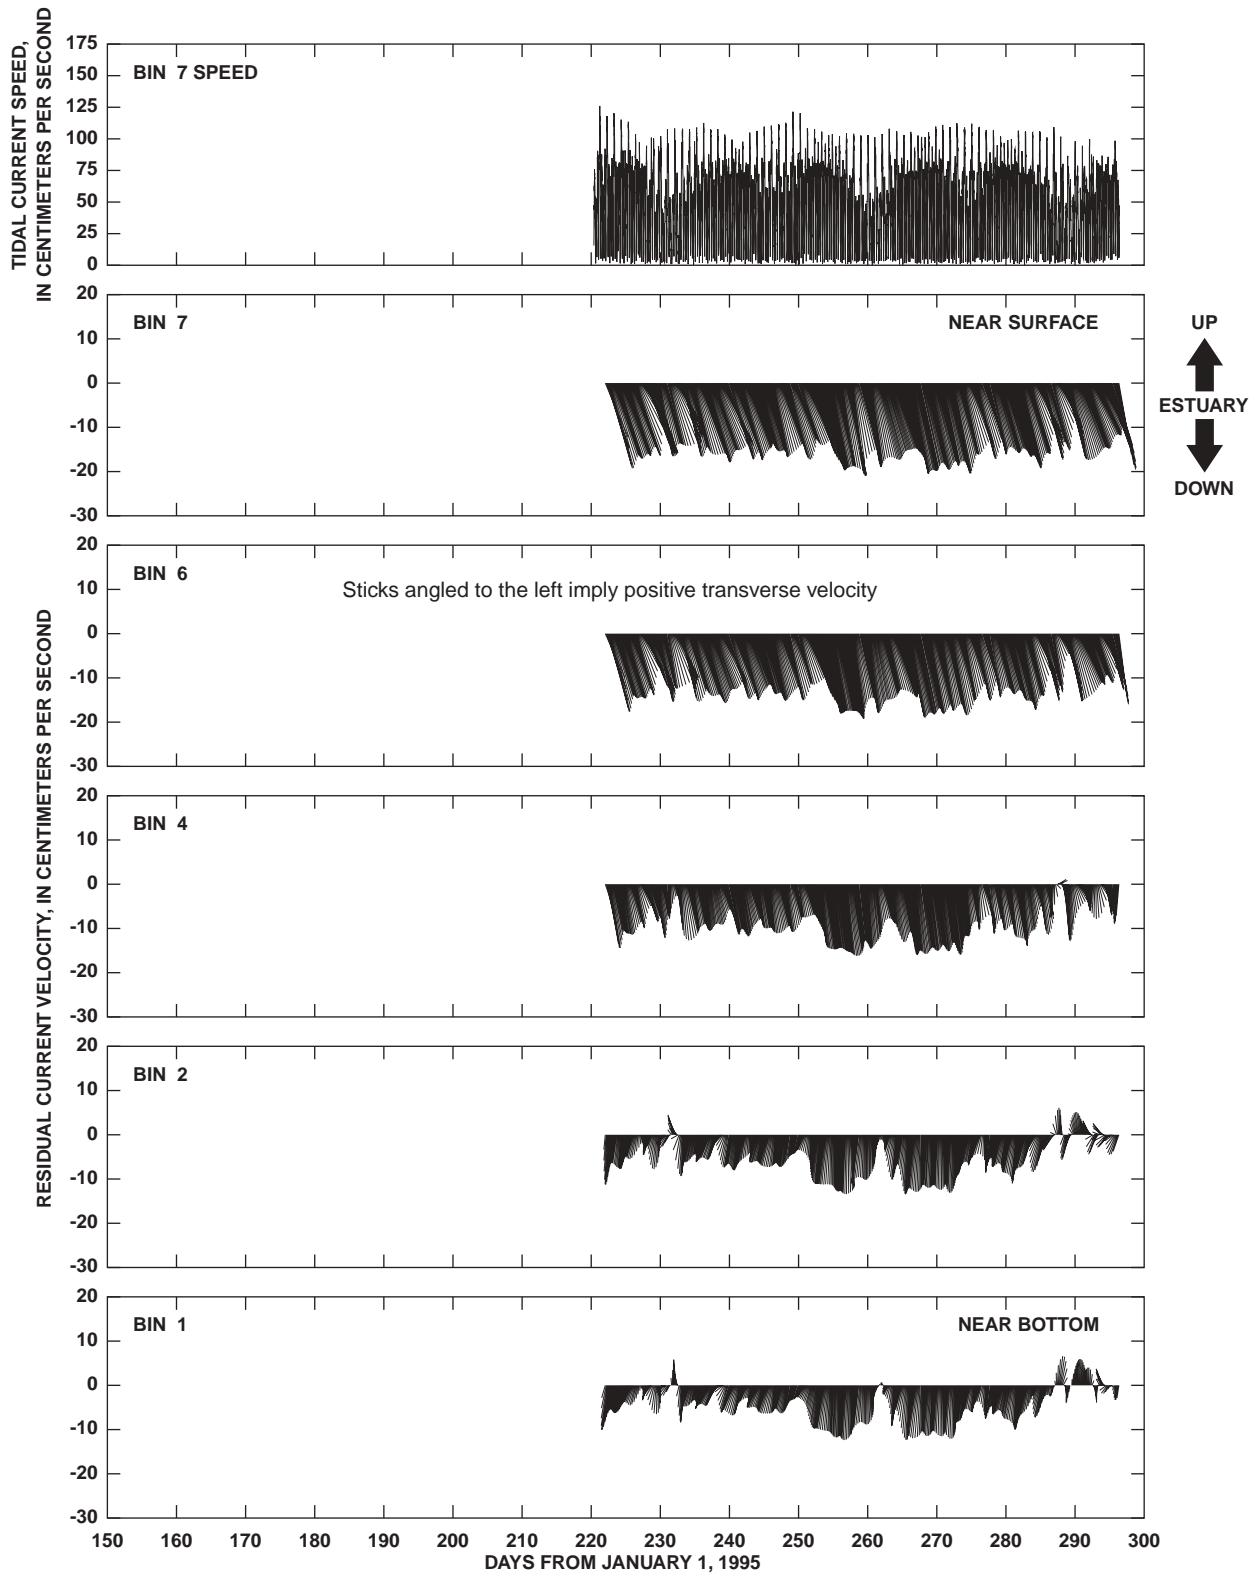

Figure Q13. Residual currents, Station MID, August 10 through October 23, 1995, Suisun Bay, California. Tidal current speed at BIN 7 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 103.0 degrees true.

APPENDIX R—STATION MOTH

Station Name: **MOTH**

(Mothball fleet)

Position: Lat. $38^{\circ}05'29''$

Long. $122^{\circ}04'30''$

Depth: 8.9 m (MLLW)

Manufacturer	Serial Number	Deployment Dates
CTD: Ocean Sensors	OS200 305	9/18/95(261) - 10/23/95(296)
V: InterOcean	S408782106	9/18/95(261) - 10/23/95(296)
OBS: D & A	OBS3 683	9/18/95(261) - 10/23/95(296)

Serviced: 9/18/95(261), 10/23/95(296)

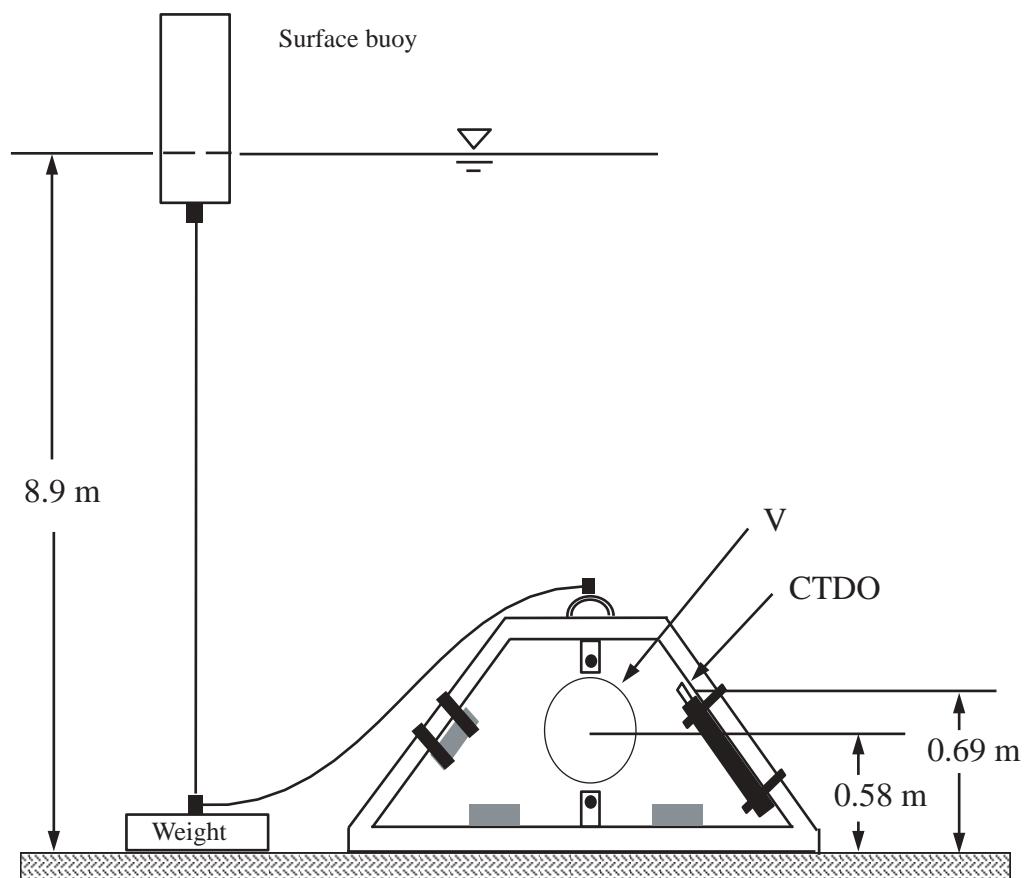

Figure R1. Configuration of instrument deployment, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California. m, meters; MLLW, mean lower low water; OBS, optical backscatterance sensor; CTD, conductivity-temperature-depth; CTDO, conductivity-temperature-depth-optical (backscatterance sensor); V, velocity.

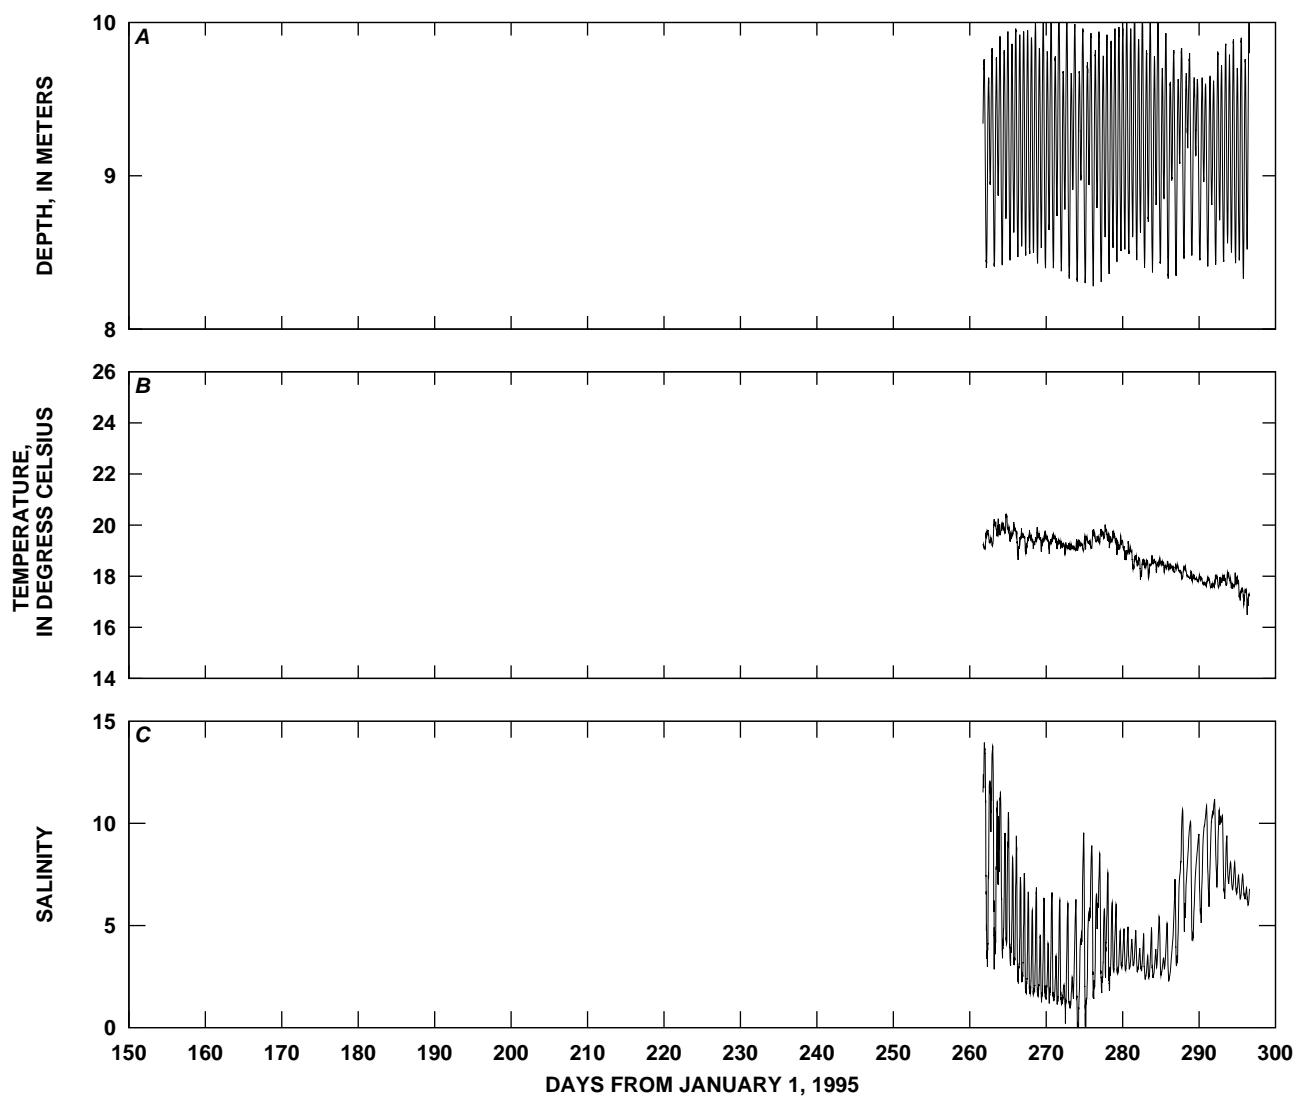

Figure R2. Time-series plots of *A*, depth; *B*, temperature; and *C*, salinity, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

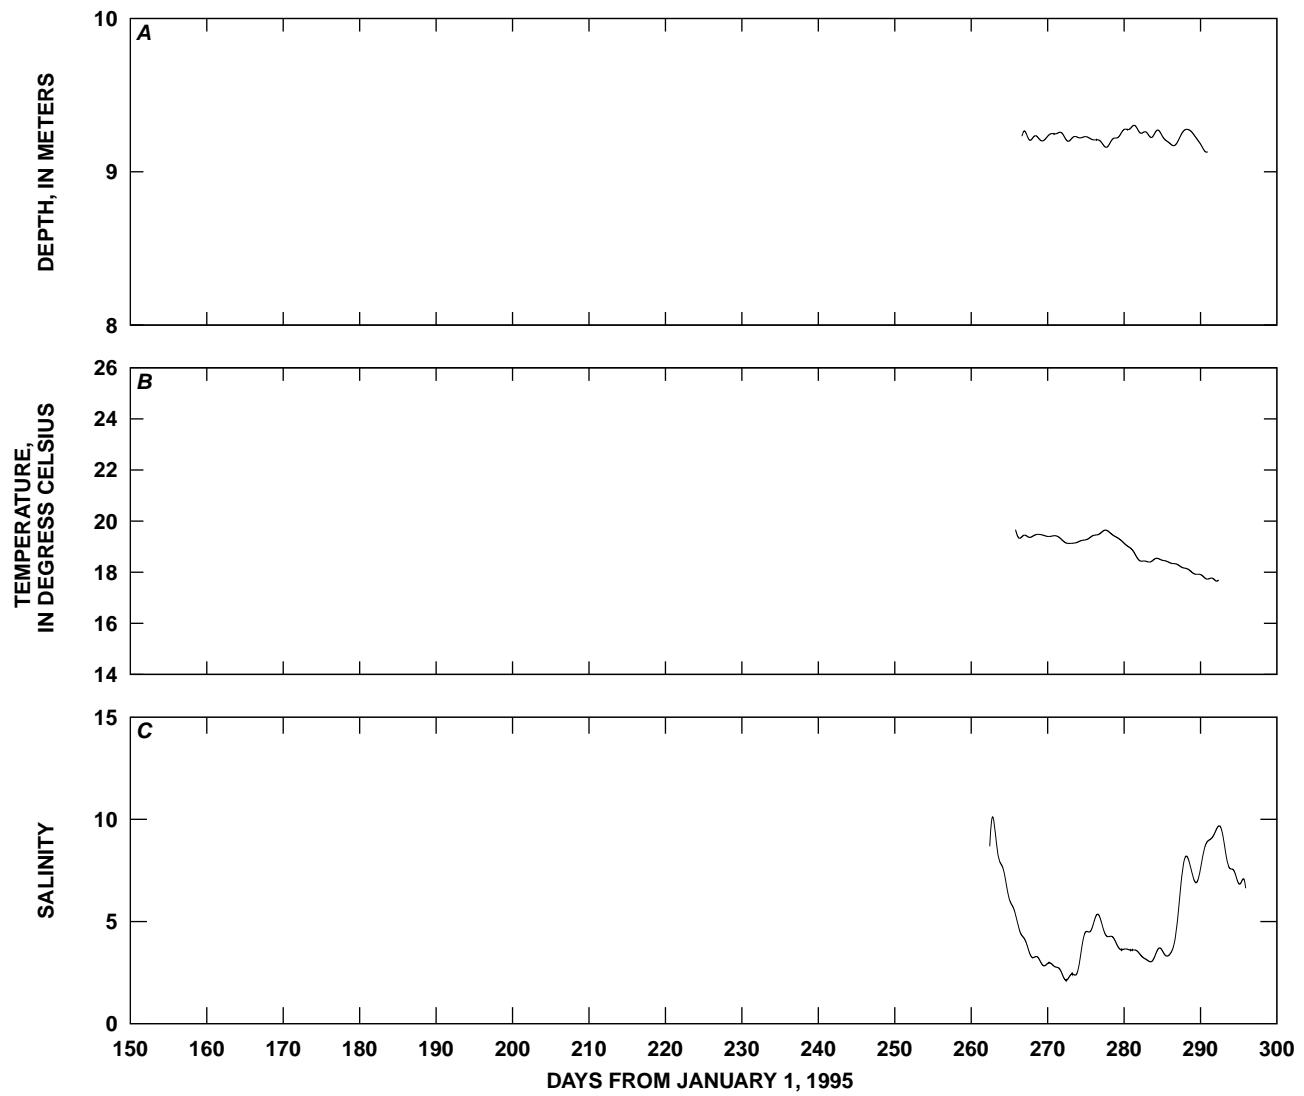

Figure R3. Time-series plots of low-pass-filtered *A*, depth; *B*, temperature; and *C*, salinity, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

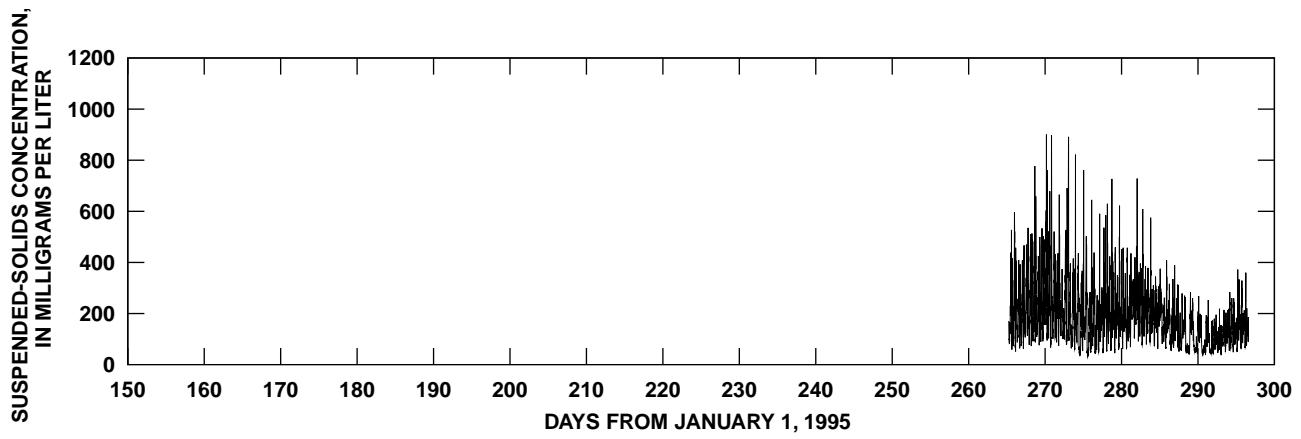

Figure R4. Time-series plot of suspended-solids concentration at Station MOTH, September 18 through October 23, 1995, Suisun Bay, California.

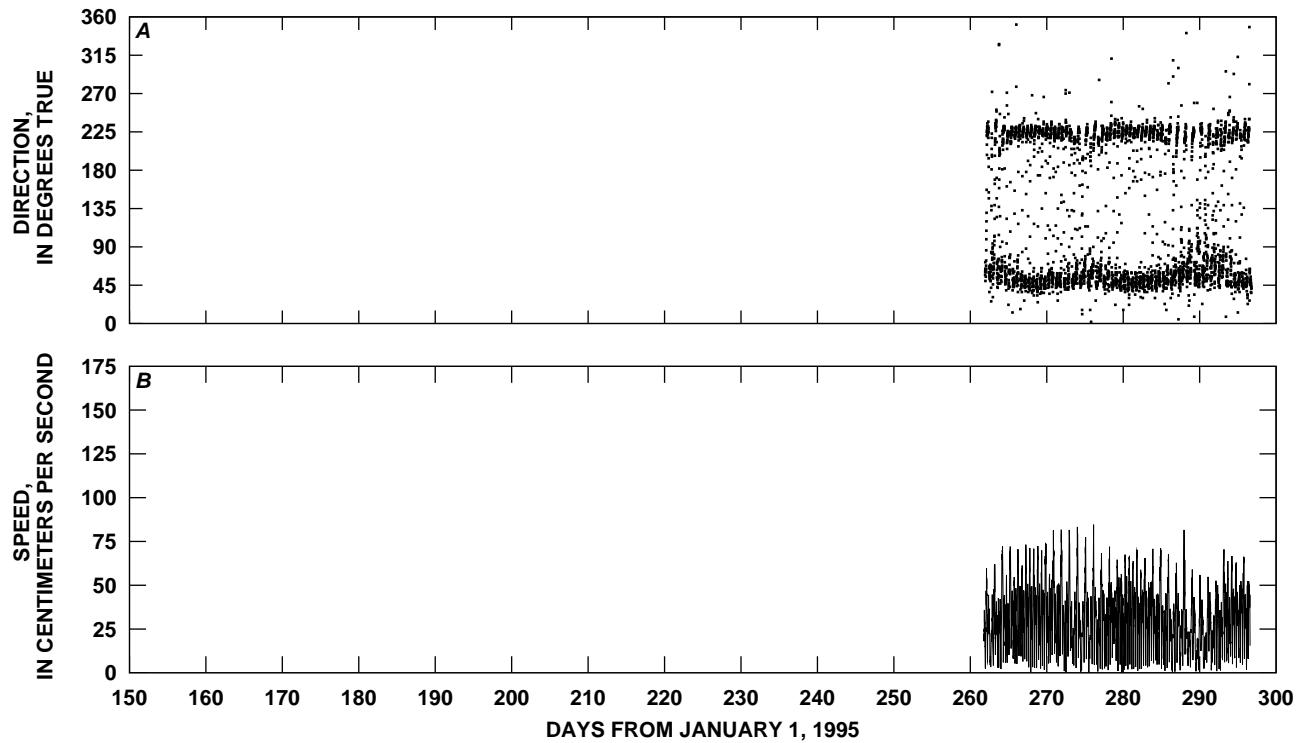

Figure R5. Time-series plots of tidal currents, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California.

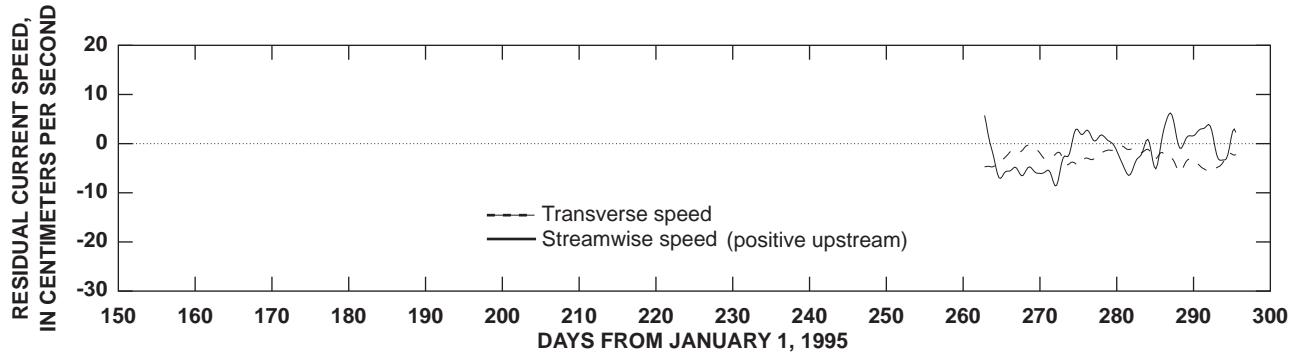

Figure R6. Longitudinal and transverse residual currents, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California. Principal direction is 47.6 degrees true.

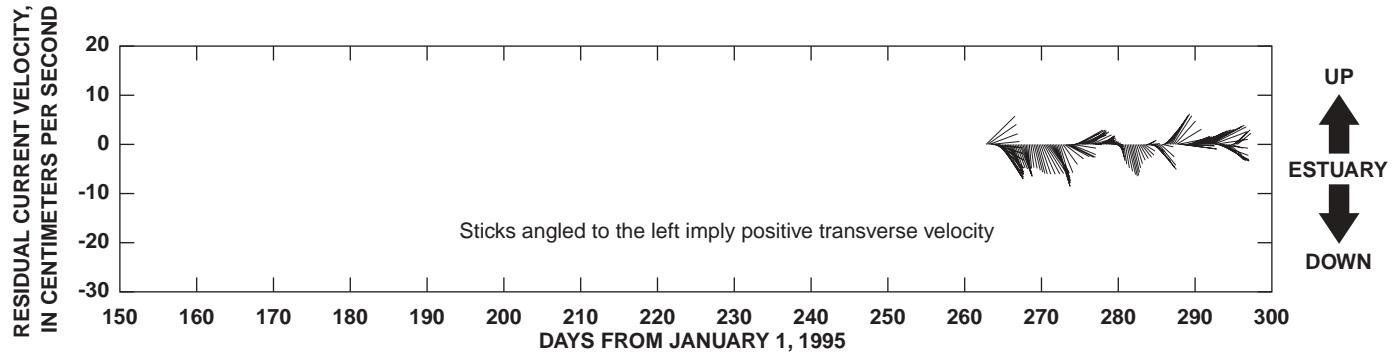

Figure R7. Residual currents, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California. Principal direction is 47.6 degrees true.

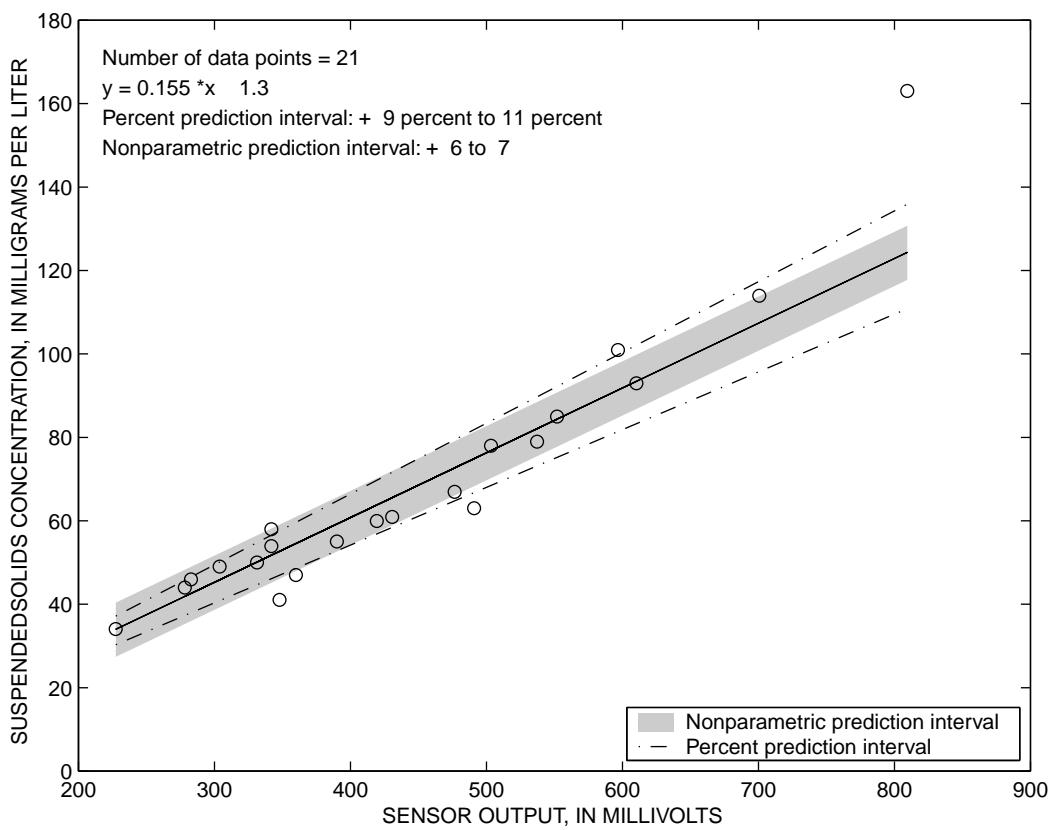

Figure R8. Calibration curve for near-bottom optical backscatter sensor, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California.

Table R1. Harmonic analysis results from depth measurements, Station MOTH, September 18 through October 23, 1995, Suisun Bay, California

Station: MOTH
Time series mean: 9.21348
Standard deviation: 0.07276
Harmonic constants: After tidal inference

M4	6.41	0.80	54.7	314.6	331.5	Clockwise <input type="checkbox"/>

Rootmeansquare speed, (cm/s): 35.51
Standard deviation, U series (cm/s): 6.91
Standard deviation, V series (cm/s): 6.73
Tidal form number: 0.55
Spring tidal current maximum (cm/s): 81.96
Neap tidal current maximum (cm/s): 27.53
Principal current direction (deg. T): 47.64

APPENDIX S—STATION RYER

Station Name: **RYER**
(West end of channel between
Roe and Ryer Islands)

Position: Lat. $38^{\circ}04'45''$

Long. $122^{\circ}02'11''$

Depth: 6.2 m (MLLW)

<i>Manufacturer</i>	<i>Serial Number</i>	<i>Deployment Dates</i>
CT: Seabird	Seacat 415	7/7/95(188) - 8/18/95(230)

Serviced: 7/7/95(188), 8/18/95(230)

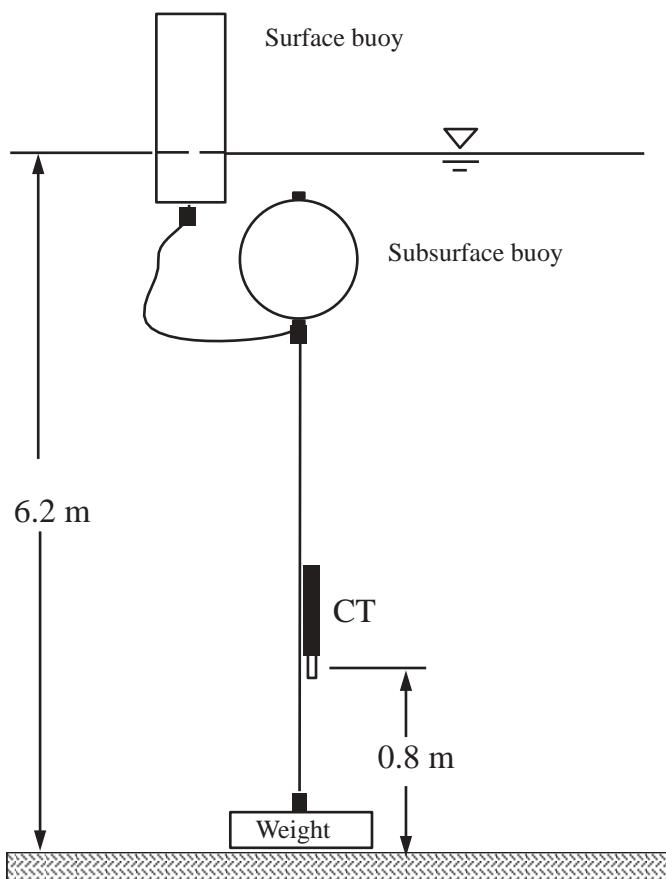

Figure S1. Configuration of instrument deployment, Station RYER, July 7 through August 18, 1995, Suisun Bay, California. m, meters; MLLW, mean lower low water; CT, conductivity-temperature.

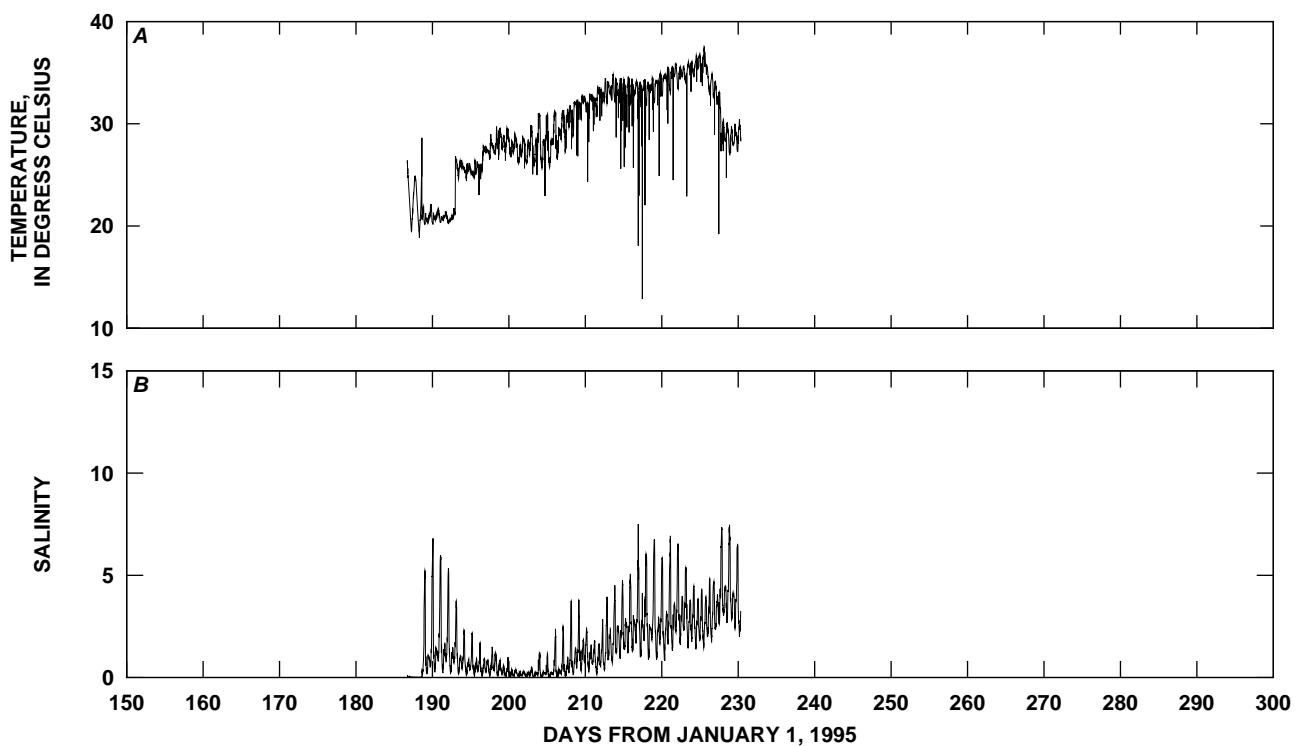

Figure S2. Time-series plots of *A*, temperature; and *B*, salinity, Station RYER, July 7 through August 18, 1995, Suisun Bay, California. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993). The temperature record for this site (*A*) is well out of the normal range for this location; a bad sensor is suspected.

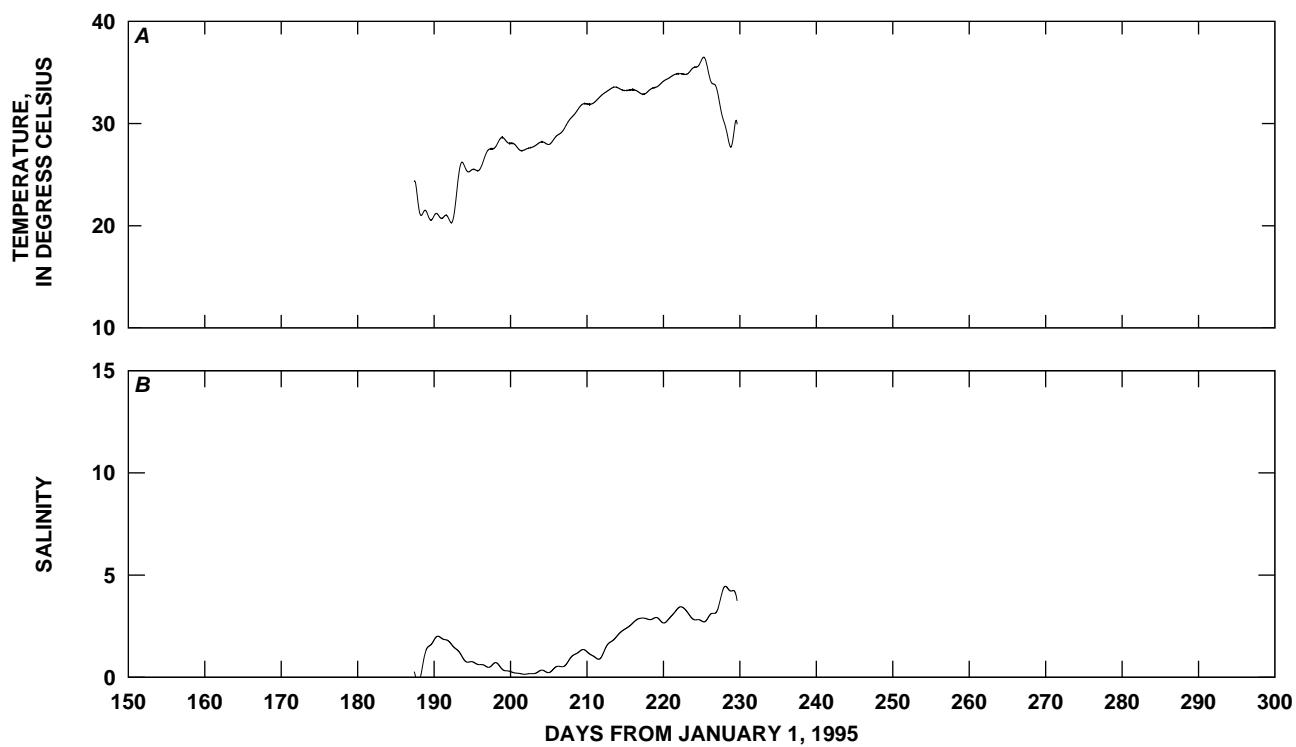

Figure S3. Time-series plots of low-pass-filtered *A*, temperature; and *B*, salinity, Station RYER, July 7 through August 18, 1995, Suisun Bay, California. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993). The temperature record for this site (*A*) is well out of the normal range for this location; a bad sensor is suspected.

APPENDIX T—STATION RYERE

Station Name: RYERE
 (Near Bulls Head channel)
Position: Lat. $38^{\circ}04'28''$
 Long. $122^{\circ}01'16''$
Depth: 5.3 m (MLLW)

Manufacturer	Serial Number	Deployment Dates
CTDb: Ocean Sensors	OS200 303	6/27/95(178) - 7/7/95(188)
Ocean Sensors	OS200 302	7/7/95(188) - 8/18/95(230)
ADCP: RDI	BB 1270	6/1/95(152) - 8/18/95(230)
		Surface buoy
Serviced: 6/1/95(152), 6/27/95(178), 7/7/95(188), 8/8/95(220), 8/18/95(230)		

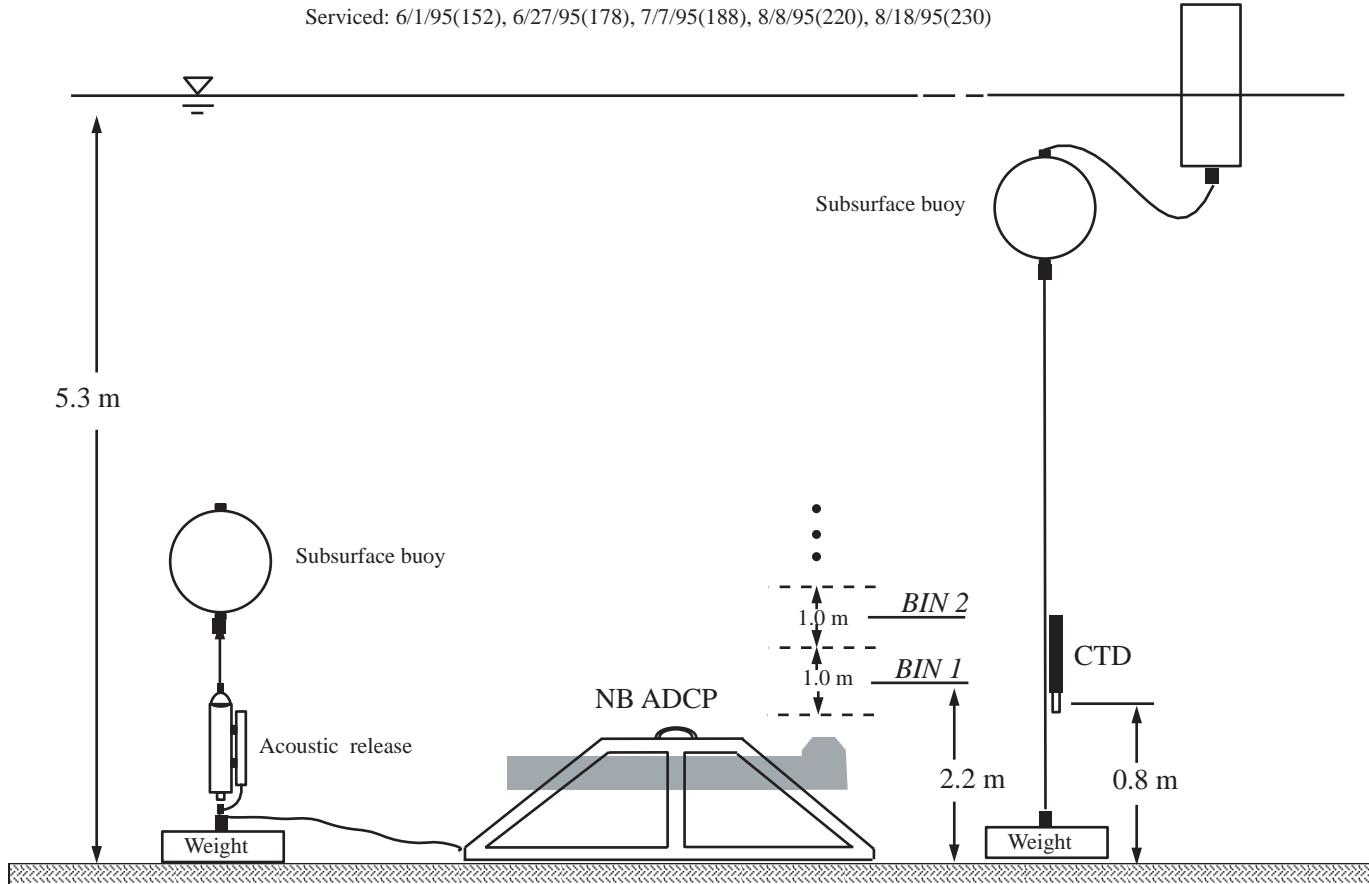

Figure T1. Configuration of instrument deployment, Station RYERE, June 1 through August 18, 1995, Suisun Bay, California. m, meters; MLLW, mean lower low water; ADCP, acoustic Doppler current profiler; NB ADCP, narrow-band acoustic Doppler current profiler; CTD, conductivity-temperature-depth; BIN, a discrete measurement location in the vertical.

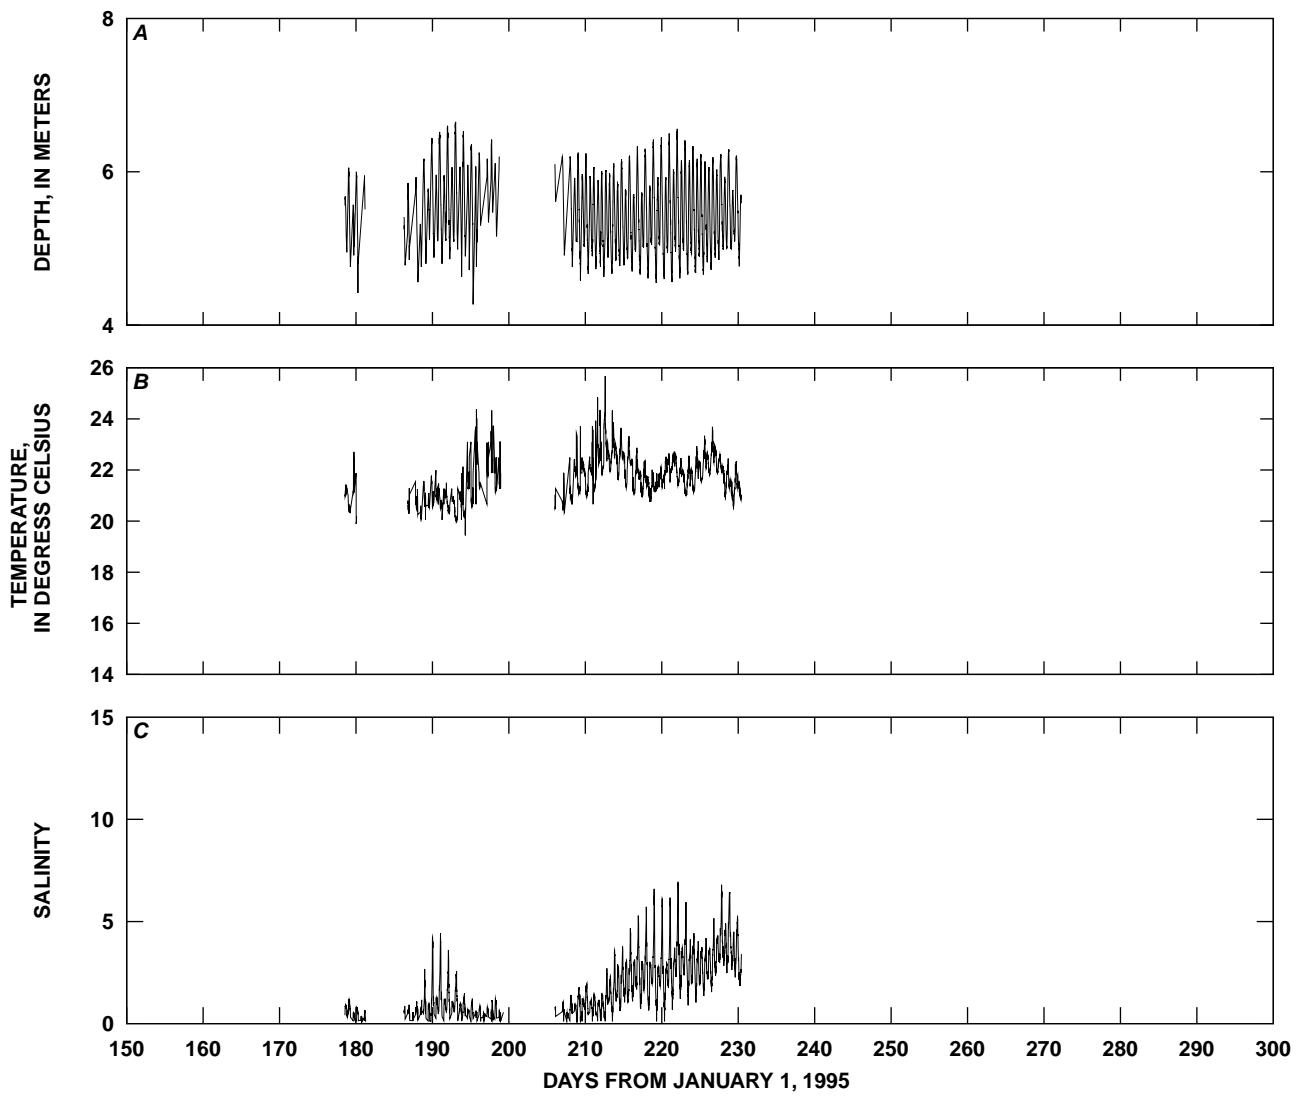

Figure T2. Time-series plots of *A*, depth; *B*, temperature; and *C*, salinity, Station RYERE, June 27 through August 18, 1995, Suisun Bay, California. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

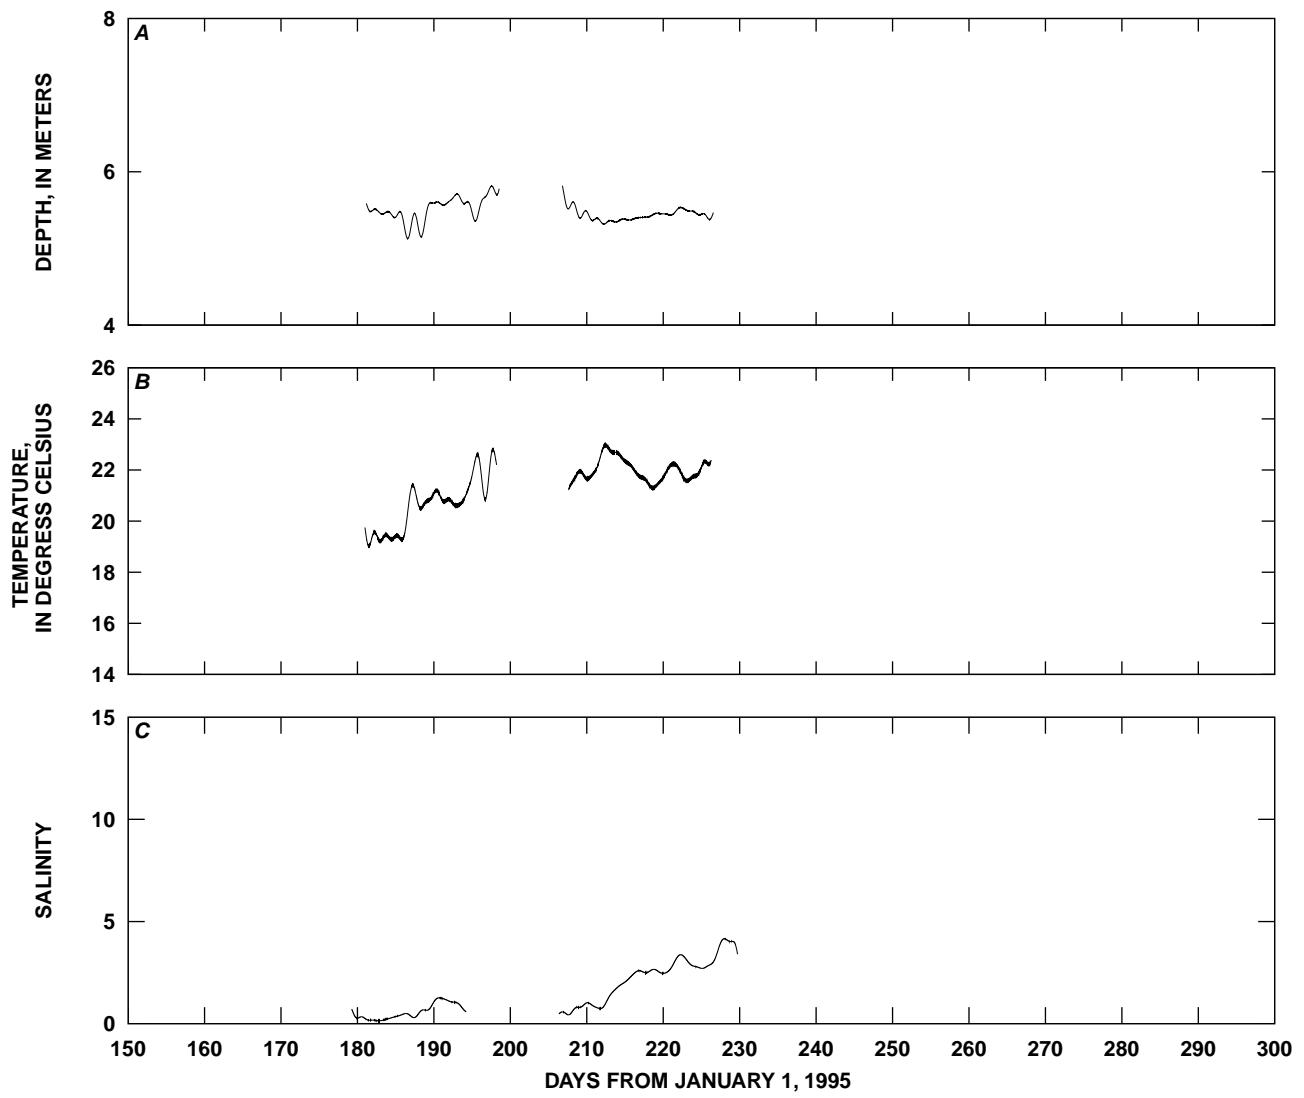

Figure T3. Time-series plots of low-pass-filtered *A*, depth; *B*, temperature; and *C*, salinity, Station RYERE, June 27 through August 18, 1995, Suisun Bay, California. Salinities in this report are presented without units because salinity is a conductivity ratio; therefore, it has no physical units (Millero, 1993).

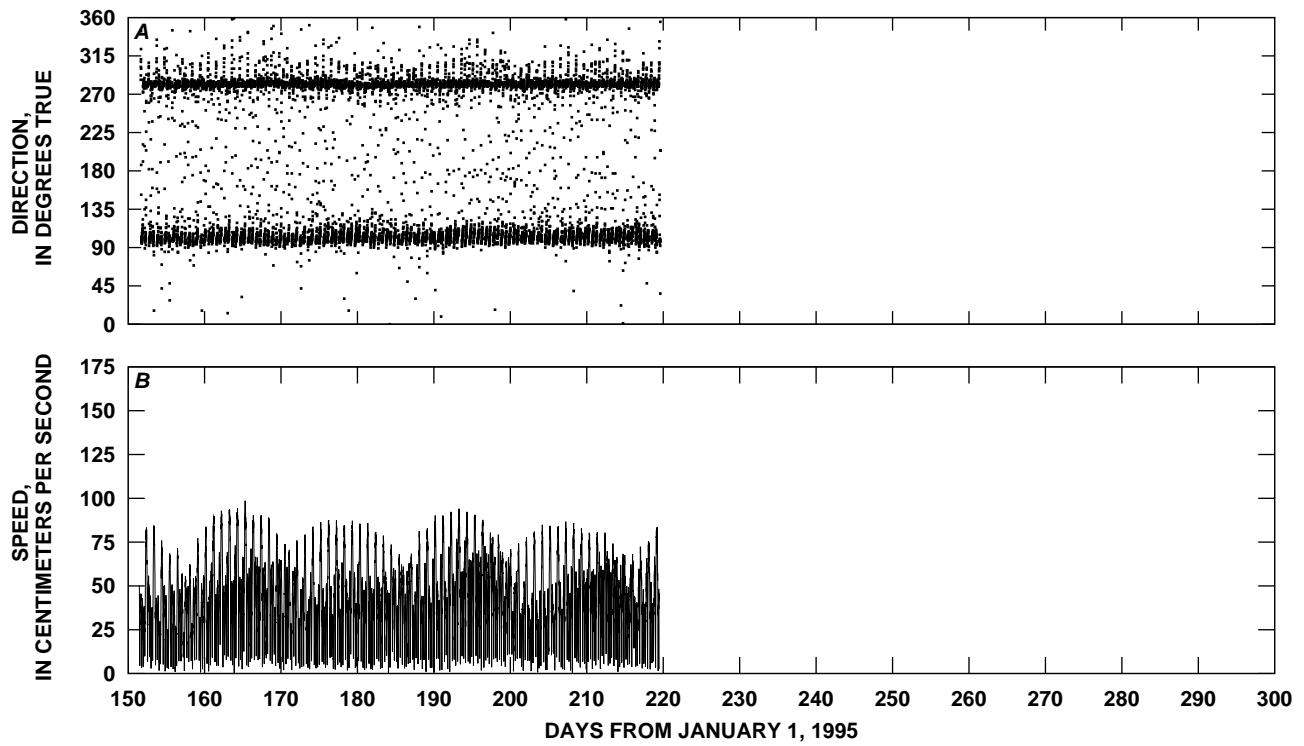

Figure T4. Time-series plots of tidal currents, Station RYERE, June 1 through August 18, 1995, BIN 1 near-bottom BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

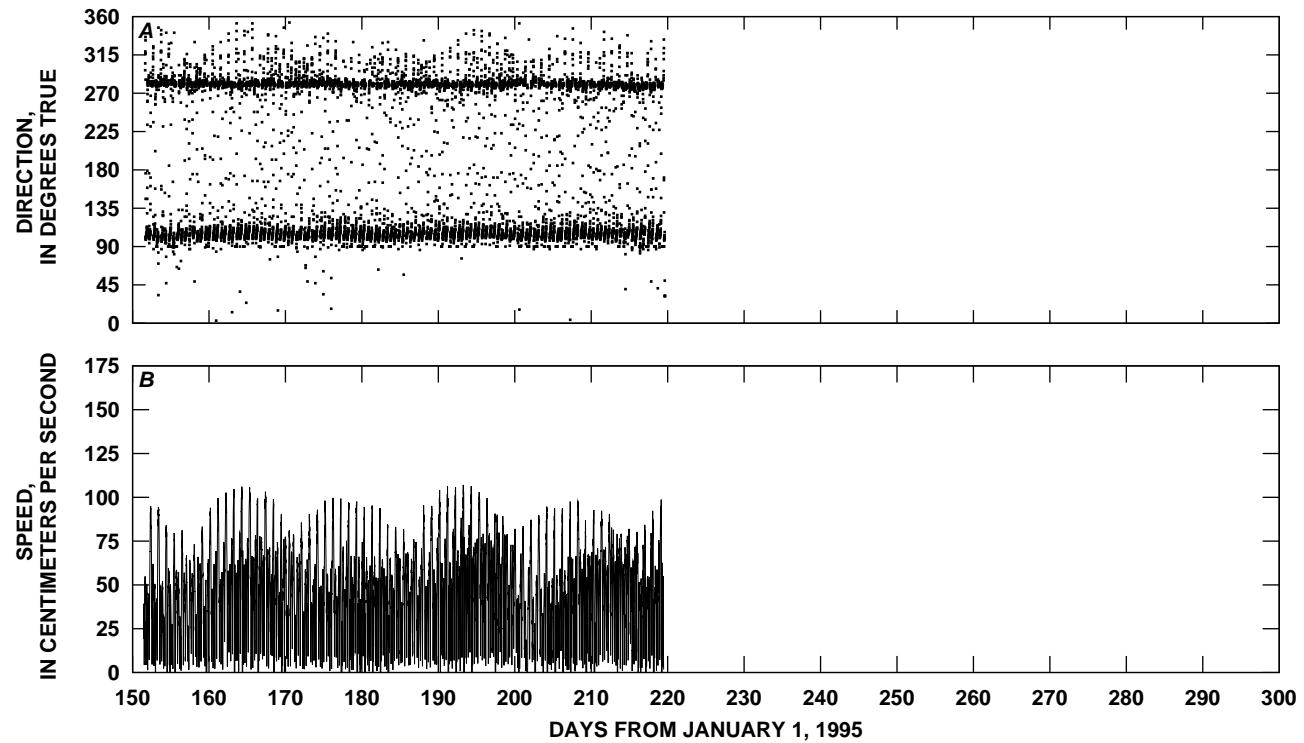

Figure T5. Time-series plots of tidal currents, Station RYERE, June 1 through August 18, 1995, BIN 4 near-surface BIN, Suisun Bay, California. BIN refers to a discrete measurement location in the vertical.

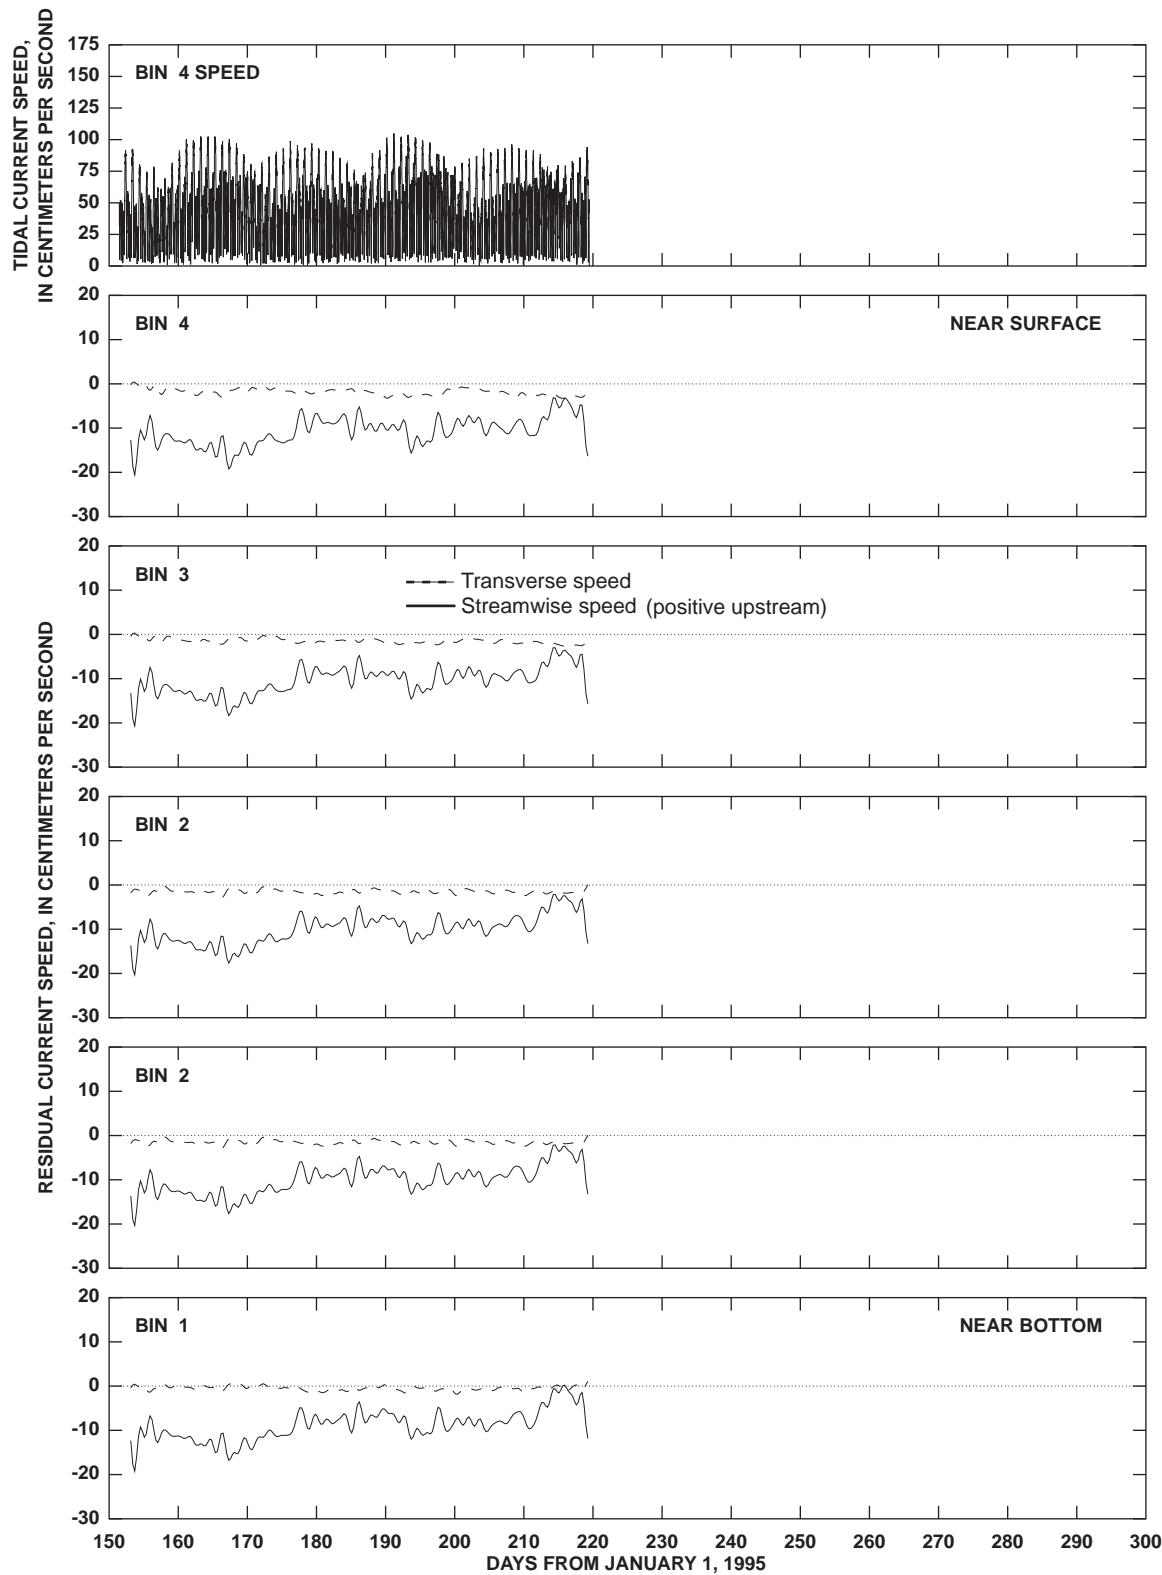

Figure T6. Longitudinal and transverse residual currents, Station RYERE, June 1 through August 18, 1995, Suisun Bay, California. Tidal current speed at BIN 4 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 102.4 degrees true.

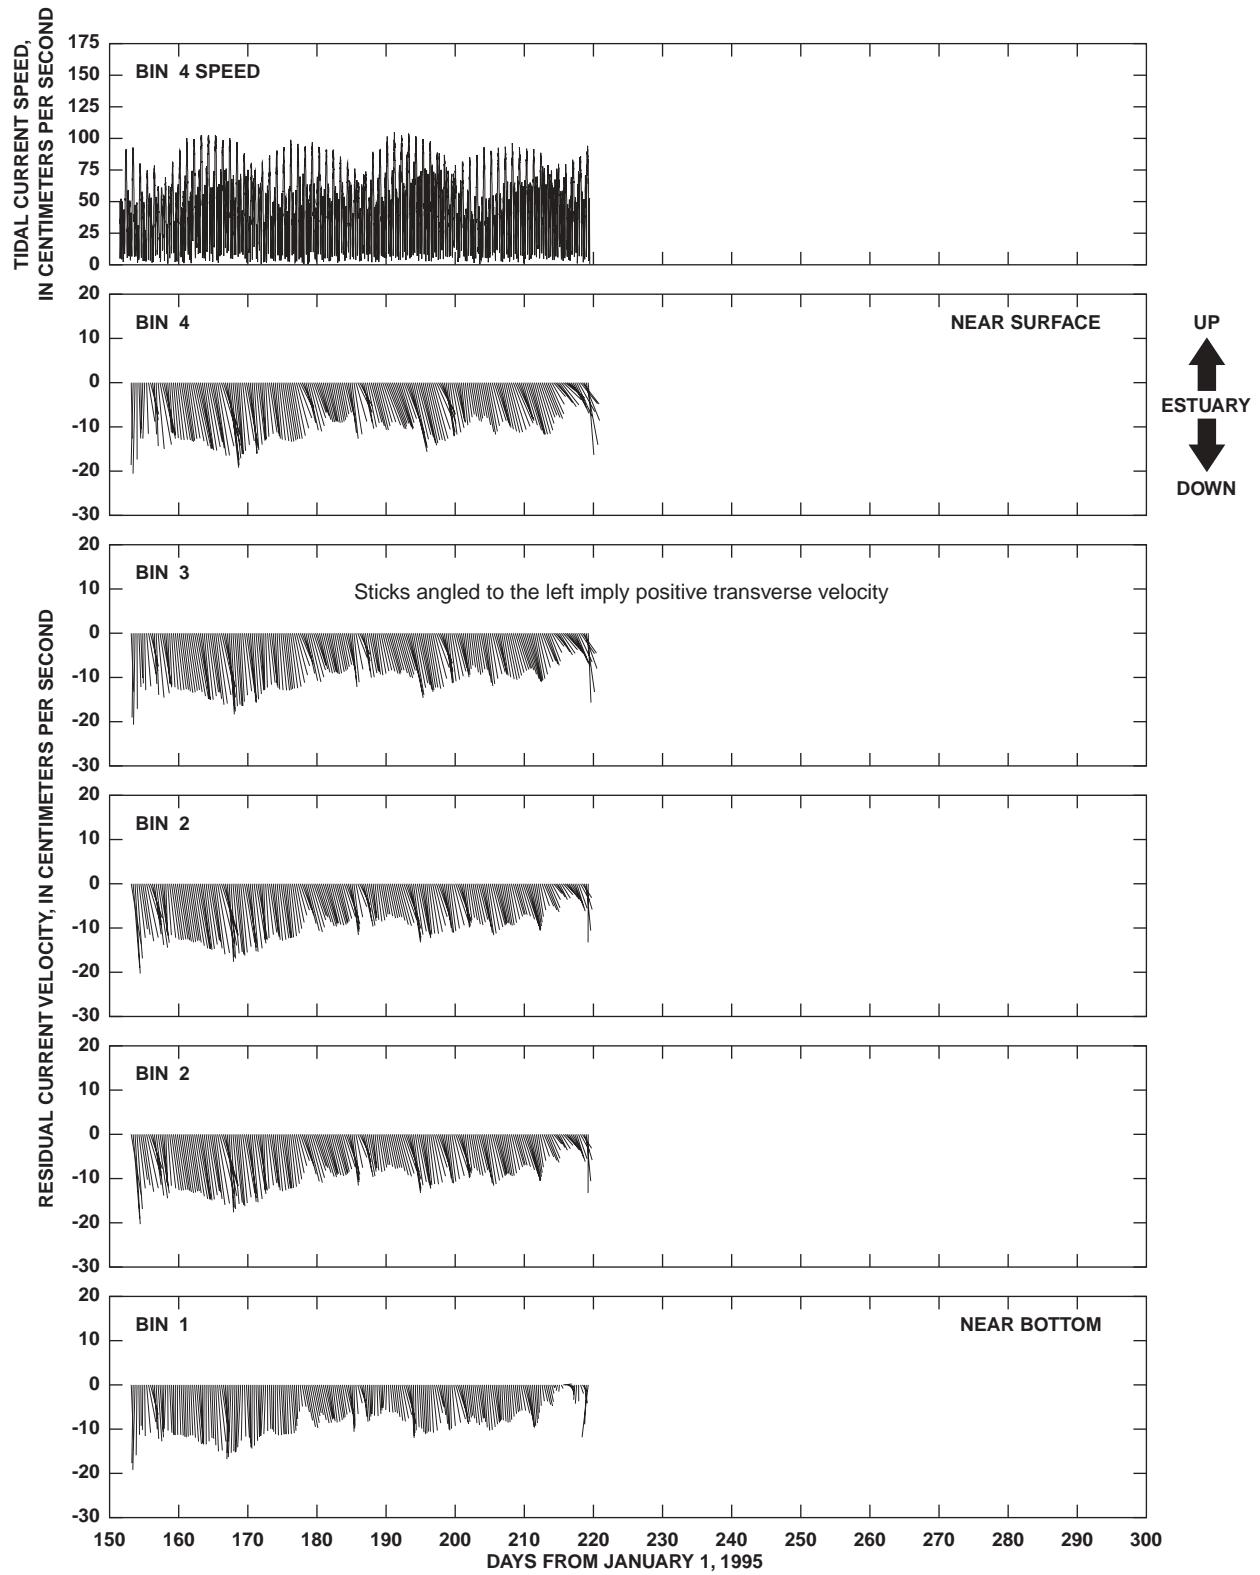

Figure T7. Residual currents, Station RYERE, June 1 through August 18, 1995, Suisun Bay, California. Tidal current speed at BIN 4 near-surface BIN is shown in the top panel for reference. BIN refers to a discrete measurement location in the vertical. Principal direction is 102.4 degrees true.

Table T1. Harmonic analysis results from depth measurements, Station RYERE, June 27 through August 18, 1995, Suisun Bay, California

Station: RYERE
Time series mean: 5.43115
Standard deviation: 0.13792
Harmonic constants: After tidal inference
