

WATER RESOURCES RESEARCH GRANT PROPOSAL

Project ID: 2002NE33B

Title: Water Center Educational Materials

Project Type: Information Transfer

Focus Categories: Education

Keywords: Newsletter, Irrigation, Water Quality, Herbicides, Bioremediation, Groundwater

Start Date: 03/01/2001

End Date: 02/28/2002

Federal Funds: \$19,000

Non-Federal Matching Funds: \$19,251

Congressional District: 1

Principal Investigator:

Steven W. Ress
University of Nebraska

Kyle D. Hoagland
University of Nebraska

Abstract

As research results supported by USGS and other state and federal agencies become available, it is critically important to inform the public, policy decision-makers, and water resource managers. In addition, federal, state, and private organizations, as well as industry and the general public need readily available information regarding contacts for water resource related questions and additional information, new federal and state policies, educational opportunities through the university, and other water-related issues. Thus, the primary aim of this Information Transfer Plan is to better inform citizens and agency personnel concerning water resource quality and quantity issues of health, economic, and esthetic importance. The specific objectives are to publish a newsletter (Water Current) six times during the year, including an estimated distribution of 4,000 copies, and to produce and publish special educational and informational materials dealing with timely and important water issues throughout the year using high quality graphics and print-quality materials.
