WHMI

WHITE, GREAT & LITTLE MIAMI RIVER BASINS

Combined cycle 1 study units

MIAM Great and Little Miami River Basins

WHIT White River Basin

The following maps show land use characterization within 500-m of wells sampled by the USGS National Water-Quality Assessment Program to study land-use effects on water quality. Cycle 1 (1991 to 2001) and/or cycle 2 (2002-2013) land use at each site is displayed along with an indication of land use changes.

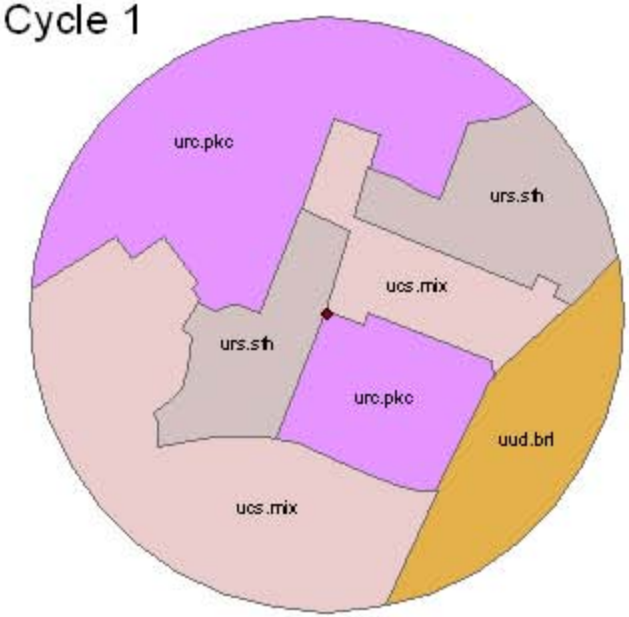

In some cases land use was inconsistently mapped between cycle 1 and cycle 2. Sometimes cycle 2 land use was characterized by someone who did not use the previous cycle 1 land use characterization as a guide. This resulted in apparent land use changes when, in reality, land use did not change between cycles. Sometimes inconsistencies appear in the identification of a land-use category (for example: identifying an area as 'mixed forest' in cycle 1 but as 'deciduous forest' in cycle 2; or identifying an area as 'residential mixed housing' in cycle 1 but as 'farm residence/farm structures' in cycle 2) and other times inconsistencies are in the delineation of the land-use area (for example delineating a road as a separate category in one cycle but including it with adjacent land use in the next cycle). Other apparent land use changes are because some of the spatial data from the different cycles do not align exactly due to spatial misalignment of DOQs which were used as a backdrop for digitizing.

The maps reflect data archived as of 01/09/2009. Contact Terri Arnold tlarnold@usgs.gov for more information or look at the USGS internal-use web page: http://water.usgs.gov/nawqa-only/luchar/

These maps were created by Kevin Jungk and Jacqueline Thomas under the direction of Terri Arnold during the Summer 2008.
